Headshop drugs across Europe: data from the EMCDDA

Dr Jean Long

Improving people’s health through research and information
New and emerging substances

- New psychoactive substances and new patterns of drug use can have important public health and policy implications
- Difficult to detect
- Emerge at low levels and in specific localities or among restricted subgroups of the population
Detecting new and emerging substances

- European Union’s early-warning system
  - EMCDDA
  - 1995 - joint action agreed by the European Council

- NACD’s Early Warning Committee in Ireland
Types of emerging substances

- Since 2007- more than 90 substances have been reported through the EMCDDA’s early-warning system

- 1980’s Fentanyl
- Late 1980’s Phenethylamines
- Early 1990s Tryptamines
- Early 2000’s Piperazines
- More recently cathione derivatives, synthetic cannabinoid, and indigenous plants
European surveys of headshops

- Internet has emerged as a new marketplace for psychoactive substances
- Two surveys 2008 and 2009
- 68 online shops in 2008 and 115 in 2009
- 17 countries in 2009
- UK, Germany, Austria, Netherlands, Romania
Products available

- Advertised as legal highs or herbal highs, but often synthetic chemicals
- More than 200 psychoactive substances available
- Contents on packing do not always match contents when chemically analysed
Spice

- ‘Spice’ products were offered for sale by 48% of the retailers surveyed in 2009
- 14 Countries, UK, Ireland, Latvia and Romania
- Banned in five countries
- Alternatives have already appeared
Many online retailers were offering BZP-free ‘party pills’

1-(4-fluorophenyl) piperazine (pFPP)

meta Chlorophenylpiperazine (mCPP)
Cathinone

- Six of the 13 new drugs contained cathinone
- Chemical stimulant found in the shrub Khat
- Methcathinone (MCAT) Methylmethcathinone (Mephedrone), and Methedrone
- Use can become compulsive and can create a state of psychological dependence
- Sold as bath salts and the user inhale the vapour to get a high
- Mephedrone has been linked to two deaths in Sweden in 2008.
Examples of responses

• **Spice**
  - Germany used emergency narcotics legislation to control for 1 year.
  - France classified them as narcotics
  - Austria used its medicines act
  - Luxembourg decided to control them as psychotropic substances.
  - Poland amended their narcotic law
  - The UK are in the process of controlling synthetic cannabinoids found in ‘spice’ products

• **BZP** was declared a controlled drug

• The UK has completed an update on current knowledge about Mephedrone
