MAPPING THE JOURNEY: A TREATMENT GUIDEBOOK

A collection of materials for exploring needs and planning treatment, improving communication, and reviewing treatment progress

D. F. Dansereau and D. D. Simpson, Editors
TCU Institute of Behavioral Research
(August 2005)

TCU Mapping-Enhanced Counseling manuals provide evidence-based guides for adaptive treatment services (included in National Registry of Evidence-based Programs and Practices, NREPP, 2008). They are derived from cognitive-behavioral models designed particularly for counselors and group facilitators working in substance abuse treatment programs. Although best suited for group work, the concepts and exercises can be directly adapted to individual settings.

When accompanied by user-friendly information about client assessments that measure risks, needs, and progress over time, *TCU Mapping-Enhanced Counseling* manuals represent focused, time-limited strategies for engaging clients in discussions and activities on important recovery topics. These materials and related scientific reports are available as Adobe PDF® files for free download at <http://www.ibr.tcu.edu>.

Introduction and Overview

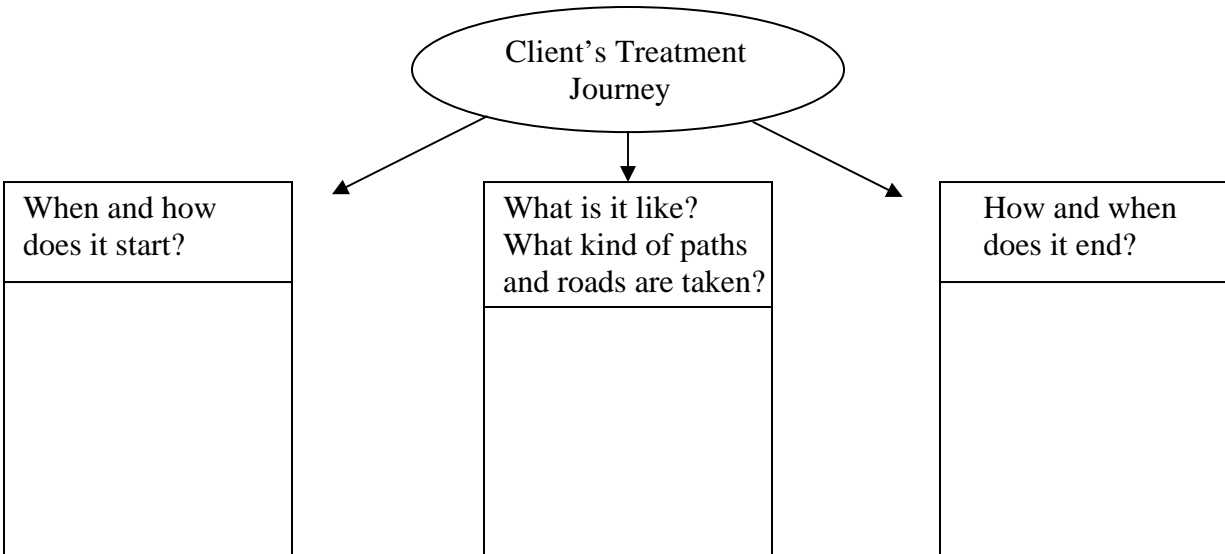

This guidebook can be used by counselors and clients to enrich and improve the treatment journey. “Mapping the Journey” is like a typical holiday travel guide where recommended tours and trips are chosen and changed to fit the traveler’s needs and desires.

In order to allow this to happen, the guidebook is divided into 8 brief guides for exploring important parts of the treatment journey. They are recommendations but can be used in any way the counselor and client choose. The order and amount of their use will surely vary from client to client. The bottom line is they are guides not prescriptions.

As with most travel books, these guides rely on maps to show the way. In this case, special maps have been developed for suggested roads on the treatment journey. They are based on materials published in two manuals – *Mapping new roads to recovery: Cognitive enhancements to counseling* (Dansereau, D.F., Dees, S.M., Chatham, L.R., Boatler, J.F., & Simpson, D.D., 1993) and *TCU guide maps: A resource for counselors* (Dees, S.M. & Dansereau, D.F., 2000) – which are available for free downloading at our website (www.ibr.tcu.edu).

What are treatment maps?

There are generally two kinds of maps that can be used in treatment. The first is a “fill-in-the-blank” map that looks like this one:

The counselor and/or client write personal answers in the blanks and then think about or discuss what they mean and how they can be used to reach goals. In this case, a completed copy might be given to the client and a copy filed for future reference. The writing in the blanks does not have to be good or complete - it is intended to stimulate thoughts and feelings rather than good penmanship. Sometimes writing may not be necessary because the map can be discussed orally.

The guides in the rest of this book contain small sets of these “fill-in-the-blank” maps. However, counselors and clients are encouraged to create their own fill-in-the-blank maps to better meet needs of the treatment journey.

Another type of map is the “free” map (see Guide 8). This type is built from scratch by the counselor and/or client. It usually starts with a key idea and then other ideas are attached as the thinking and discussion proceed.

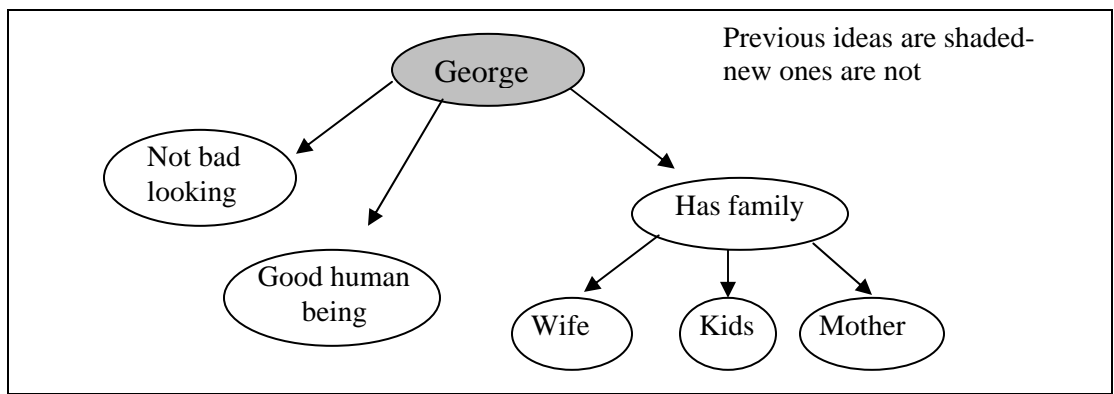

Free maps can be especially useful in exploring specific issues that are not easily covered by a fill-in-the-blank map. Free maps can be sketched out anytime during treatment. As with the fill-in-the-blank maps, neatness and completeness do not matter. They are thinking and talking guides, not artworks.

Here is a simple example of a free map. It starts with core issues in the center, then “grows” during discussion to include relevant issues connected to it.

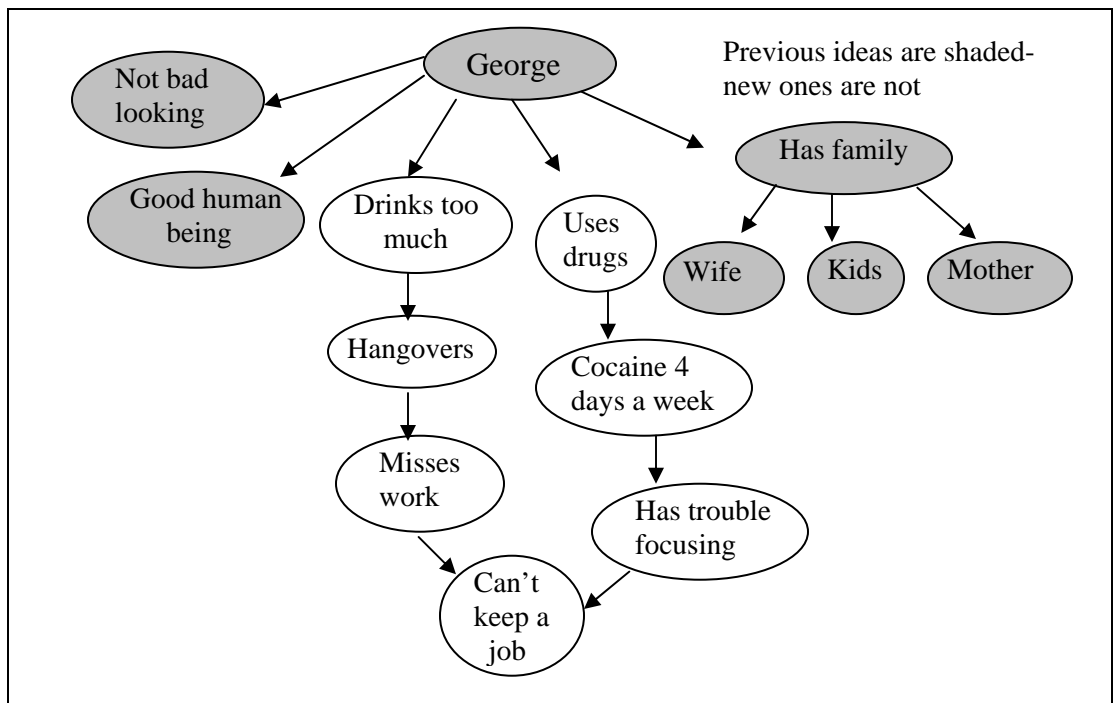

Stage 1

Stage 2

Stage 3

Why use “fill-in-the-blanks” and “free” maps?

Simply put, over 35 published articles show these maps can significantly improve the treatment journey. If you are interested in details of this scientific evidence, see the Appendix.

Who benefits from maps?

Studies show that most clients benefit from maps, but those with communication and attention problems benefit most (again, see Appendix for details). Counselors often say they too benefit by gaining a deeper understanding of their client and by having a systematic approach to guiding their interactions with clients.

When to use maps?

Maps in this guidebook can be used at any point during treatment. They work for discussing problems and needs, planning treatment, reviewing progress during counseling sessions, or as “homework” for a client or the counselor. Although their numbering reflects a popular sequence, they can be taken in any order and can be repeated over the journey as needed.

How to use maps?

Probably the best way to start using maps is to just jump in. They are easy to understand and as long as you treat them as just guides to thinking rather than prescriptions, there should be little problem getting started. The guides that make up the bulk of this book are to explore parts of the treatment journey. Once again they are:

- Mapping Guide 1: Exploring Self
- Mapping Guide 2: Social Improvement
- Mapping Guide 3: Decision Making
- Mapping Guide 4: Taking Control
- Mapping Guide 5: Monitoring Progress
- Mapping Guide 6: Relapse and Disease
- Mapping Guide 7: General Planning
- Mapping Guide 8: Free Mapping

Make working copies of selected maps or make overheads for viewing. They can be used in individual sessions, in groups, or as homework. You might find new uses for them or design your own. We would like to see your ideas and creations so that we can share them with others (contact D.Dansereau@tcu.edu with your thoughts or questions about using maps).

If you would like to see examples of the “completed maps” go to the Case Study section of this guide book.

What difficulties will you encounter?

You will likely not encounter major problems along the way if you use the maps merely as suggested guides to give you ideas. If they are not helping in a particular situation, they can be modified or not used at all. We hope you can find a set of maps will become a valuable tool in helping clients identify and reach their treatment goals.

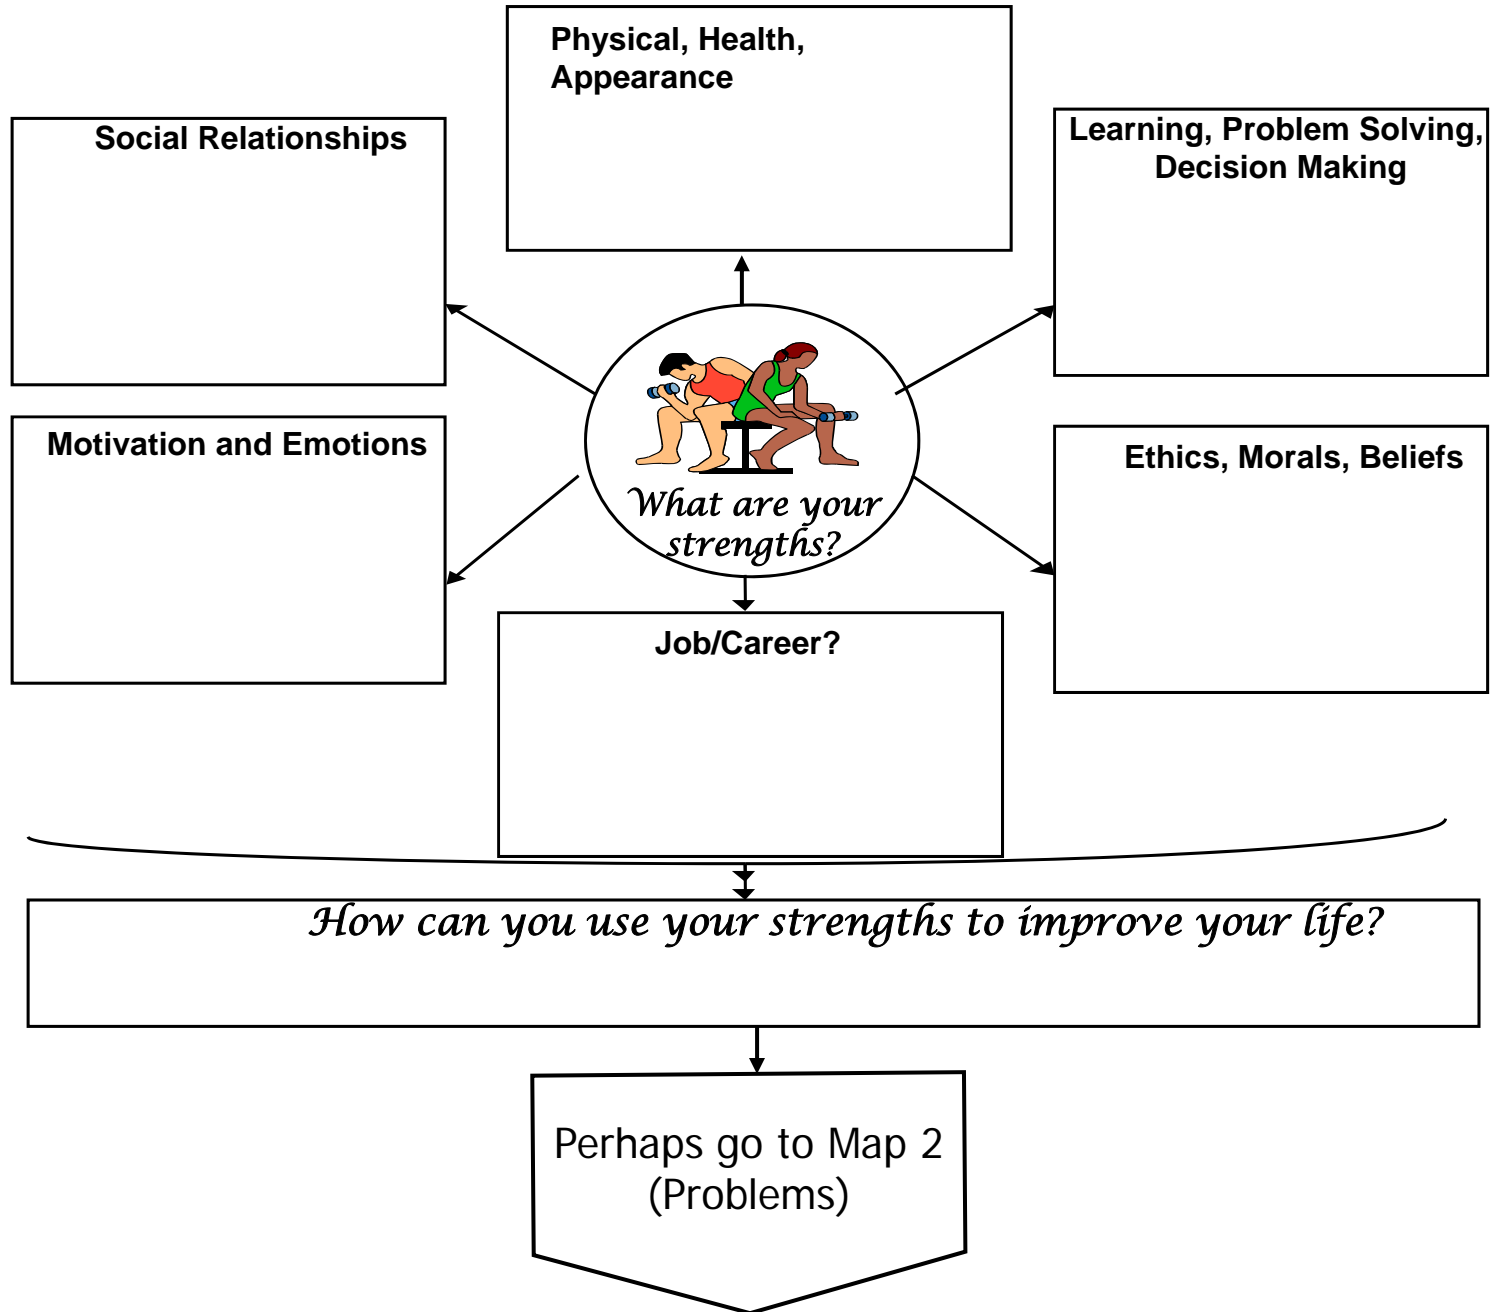

MAPPING GUIDE 1: EXPLORING SELF MAPS

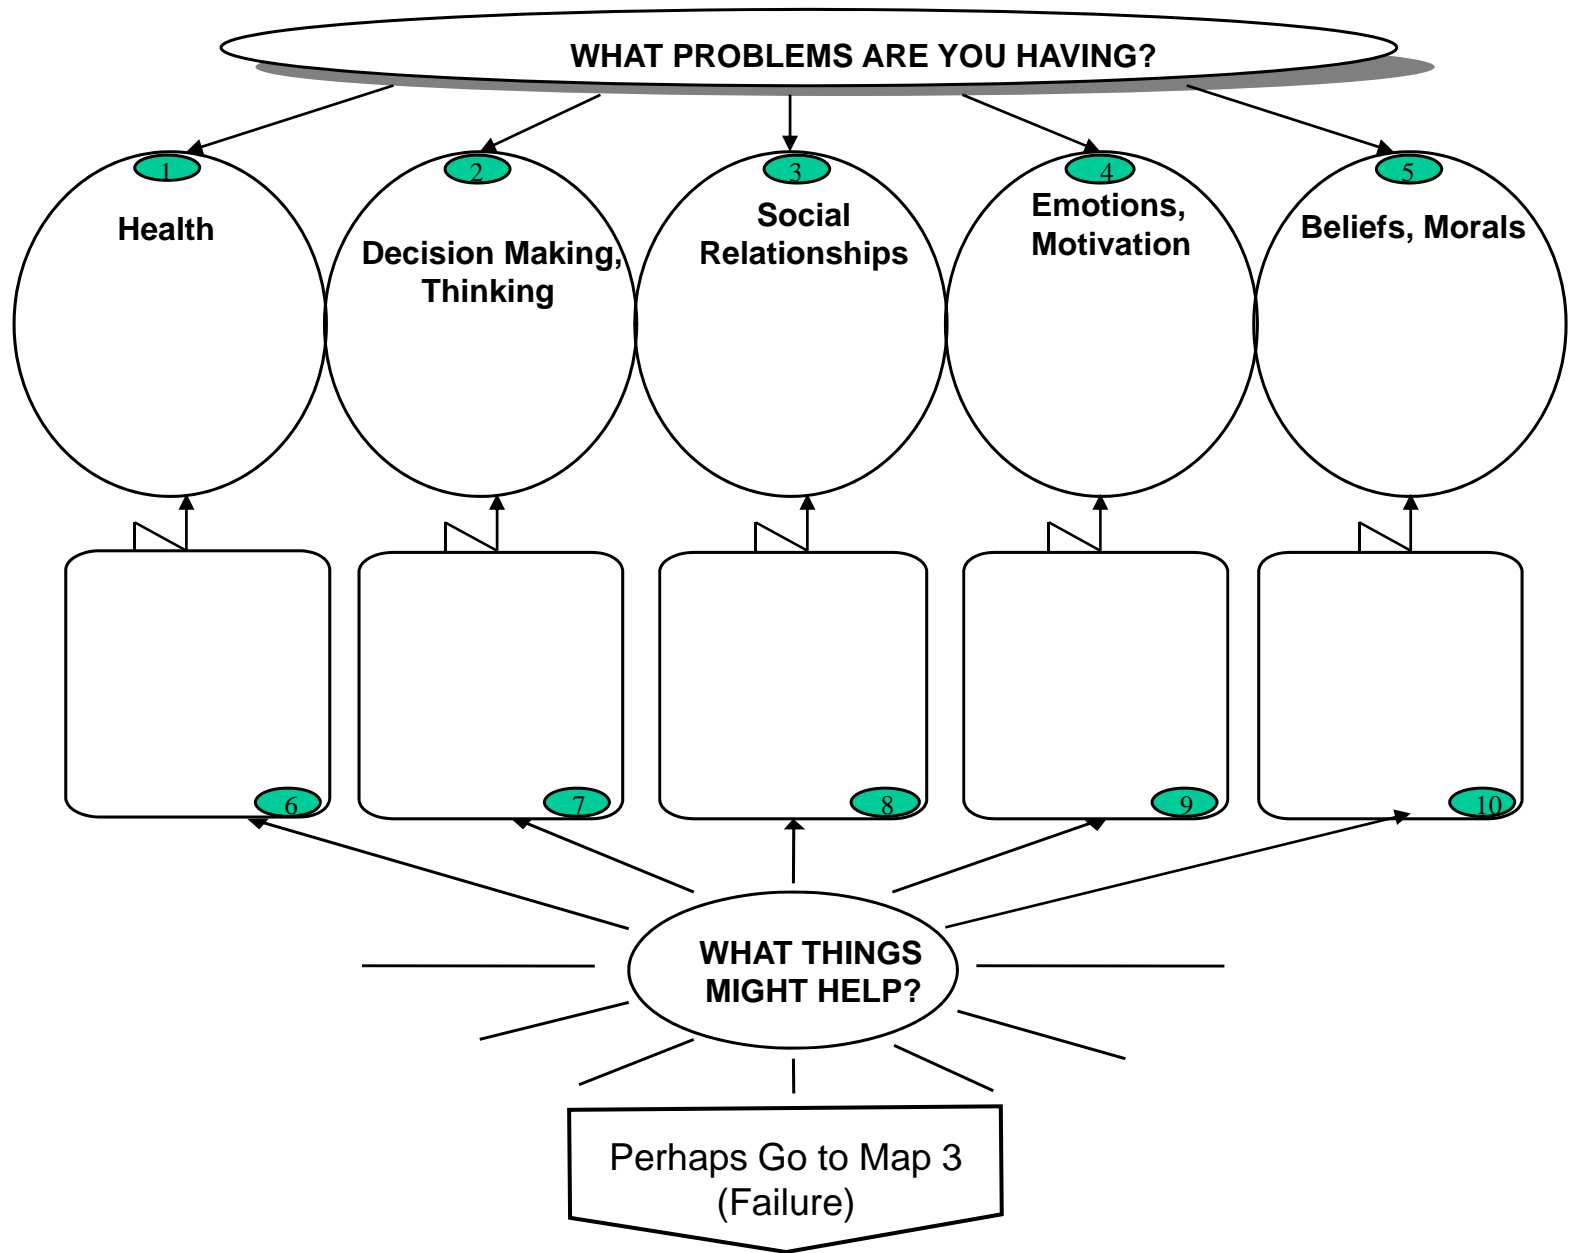

Purpose: These maps can help a person better understand their strengths and weaknesses, and how they can be used in a positive way. The maps will also help a person to develop a more accurate level of self esteem.

Method: Use Exploring Self Maps 1-4 to guide thinking. Use "Free" Mapping as needed (see Mapping Guide 8, page 36).

There are no rules; use these anyway you like!

MAPPING GUIDE 5: MONITORING PROGRESS

Purpose: These maps are designed as a guide to help clients understand, evaluate, and explain progress across key stages of change, as represented in the *TCU Treatment Process Model*. They also are tools for planning therapeutic activities that will sustain or increase future progress.

Method: The first map serves as an orientation and overall review of “how treatment works” and the program expectations for clients in treatment.

In Monitoring Progress Map 2, the client fills in the barometer for each stage indicating strength of commitment and progress. The client explains the ratings and describes what will be done so progress will be maintained or improved in the future. Ratings can be made as homework, or during sessions with counselor assistance. They can be repeated as needed to review progress.

Because these client functioning categories also are measured by the CEST assessment, comparisons can be made between client ratings on these “gauges” and scale scores.

MAPPING GUIDE 8: FREE MAPPING

Purpose: To help a person create Free Maps.

Method: Use the Free Map Guide to create maps on important thoughts, feelings, and actions. These Free Maps can be used by themselves or together with any of the Mapping Guides.

© Copyright 2004; 2005 TCU Institute of Behavioral Research, Fort Worth, Texas. All rights reserved. Permission is hereby granted to reproduce and distribute copies of these materials (except reprinted passages from copyrighted sources) for nonprofit educational and nonprofit library purposes, provided that copies are distributed at or below costs and that credit for author, source, and copyright are included on each copy. No material may be copied, downloaded, stored in a retrieval system, or redistributed for any commercial purpose without the expressed written permission of Texas Christian University.

Mapping Guide 8: Free Mapping (Guide)

Instructions for Growing a Free Map:

1. Put your main thought, feeling, or action in a box in the center of the sheet or near the top.
2. Ask a question about the thought, feeling, or action. Put the answer in a box and connect it to the main box with a line.
Here are some good questions, but you may come up with better ones.
 - a. What things lead to it or cause it?
 - b. What does it lead to or cause?
 - c. What influences it?
 - d. What is it like? What is it similar to?
 - e. What happens at the same time?
3. Repeat 2 as much as needed then do the same thing with some of the other boxes you created (i.e., ask questions and correct answers).
4. Once you have made some progress on the map, ask what could you change or look at differently in order to improve things in your life.
5. Neatness is not important. Return to the map as often as you like.

Case Study of CHRIS: *A Sample of Maps*

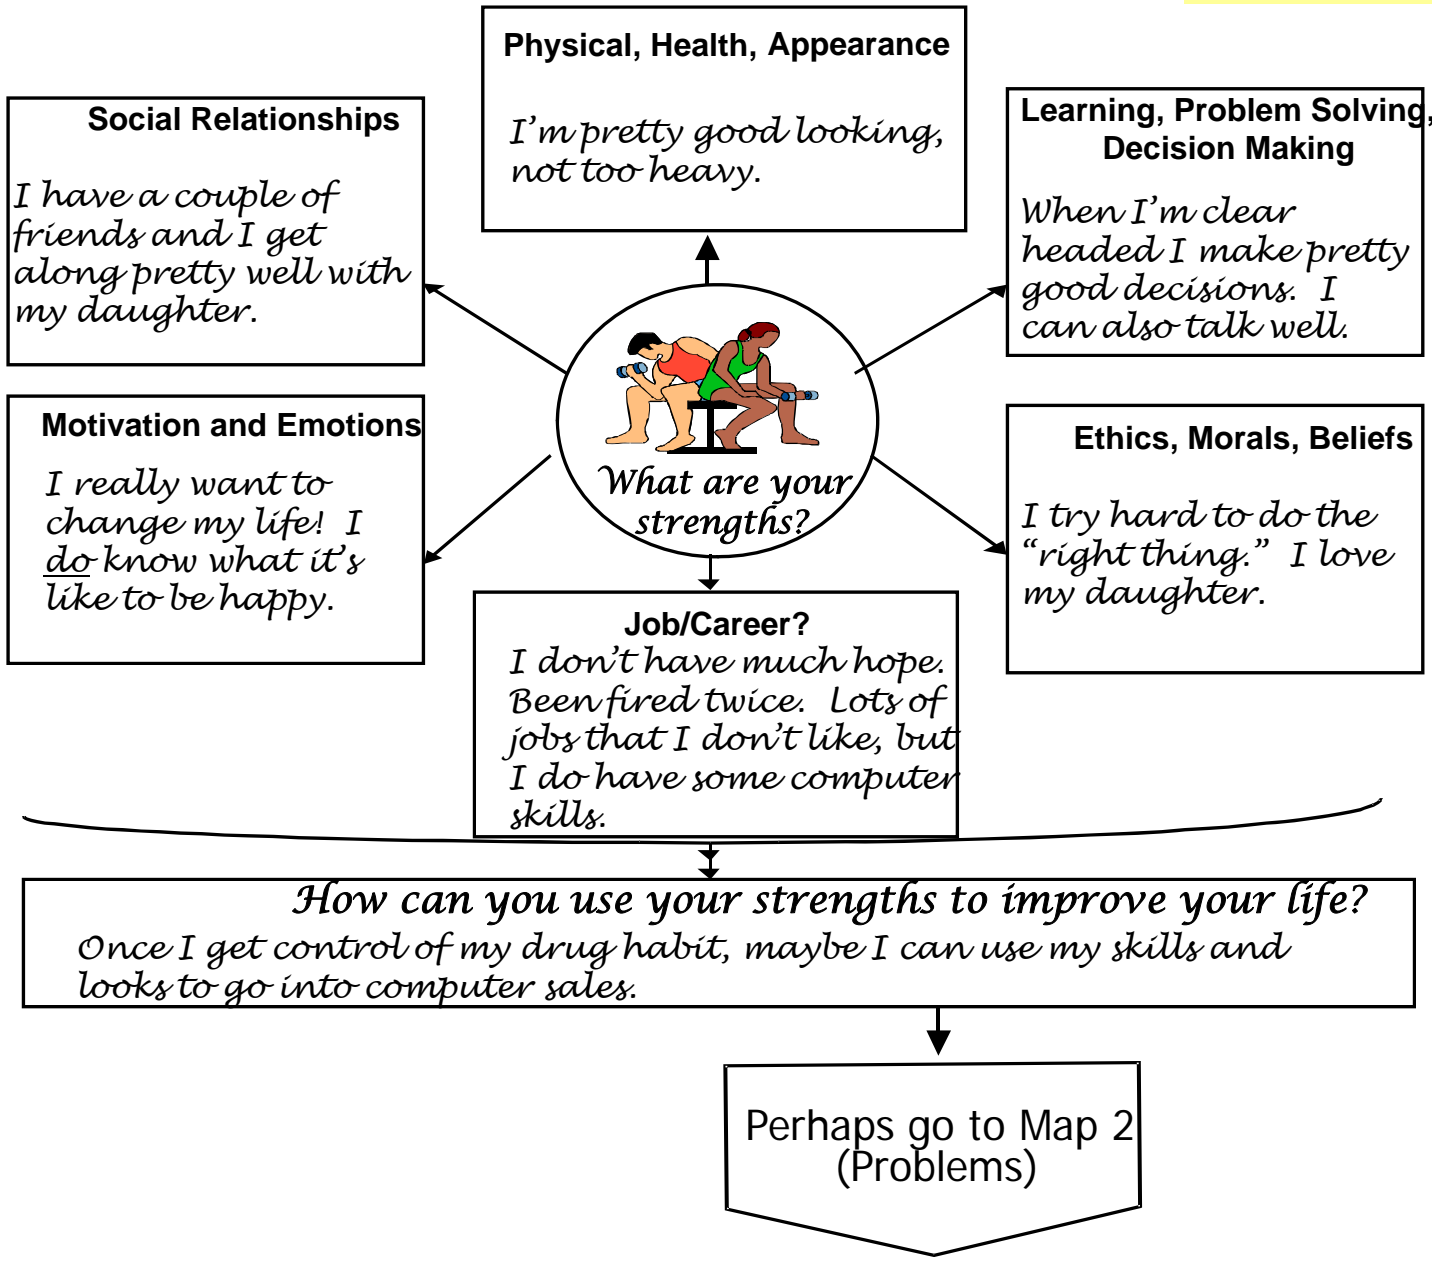

“Chris” is a fictional client who has problems with alcohol and cocaine use, as well as some interpersonal and career dilemmas that need attention.

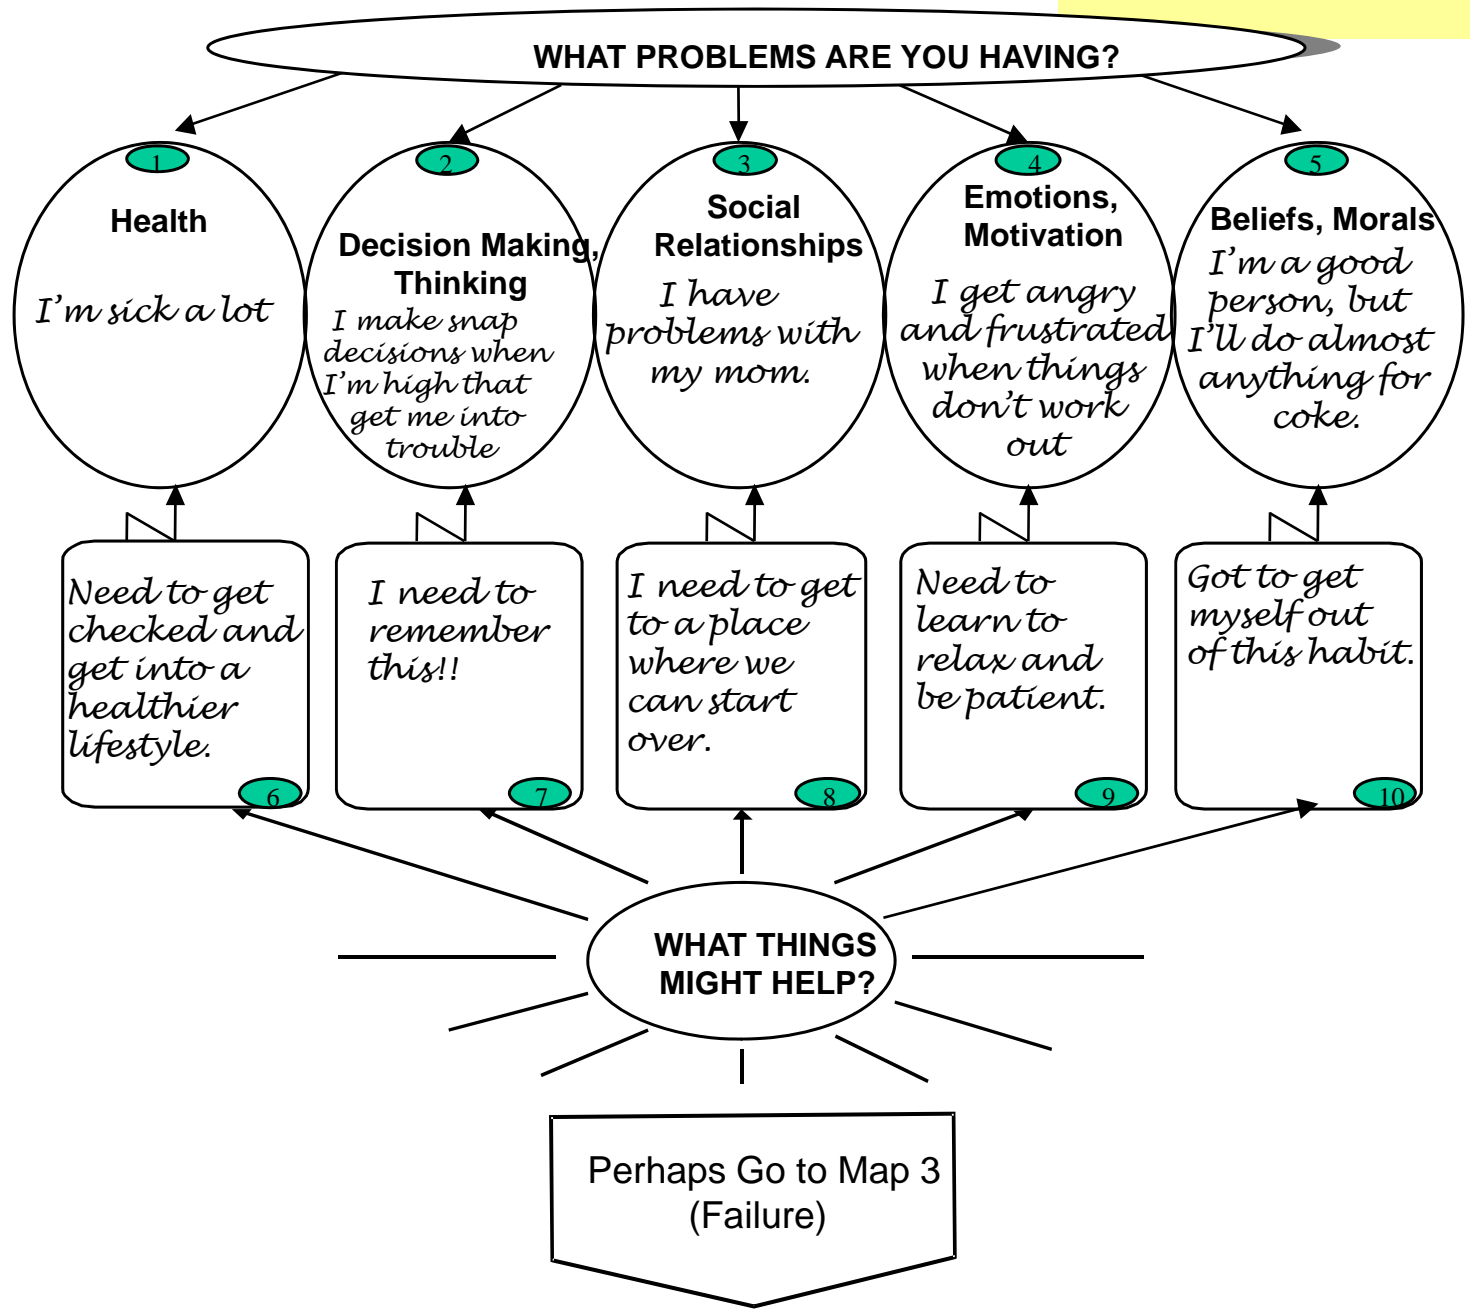

In this case study example for using guide maps, Chris and the counselor focus on some of the interpersonal issues and begin to work on improving career opportunities.

Not all the maps presented earlier in this guidebook are completed here, and some maps are used “out of sequence” in order to illustrate the flexibility in their applications. In other situations, a different collection might be used – and some could be used more than once.

The goal of this case study is to give a simple example for how mapping tools can be used during counseling.
