Statistics and research for the **Department of Health, Social Services and Public Safety** is provided by **Information Analysis Directorate (IAD)**. It comprises four statistical sections: Hospital Information, Community Information, Public Health Information & Research and Project Support Analysis.

IAD is responsible for compiling, processing, analysing, interpreting and disseminating a wide range of statistics covering health and social care.

The statisticians within IAD are out-posted from the Northern Ireland Statistics & Research Agency (NISRA) and our statistics are produced in accordance with the principles and protocols set out in the Code of Practice for Official Statistics.

#### **About Public Health Information and Research Branch**

The role of Public Health Information and Research Branch (PHIRB) is to support the public health survey function and to provide support on public health issues within the Department. The head of the branch is the Principal Statistician, Mr. Bill Stewart.

In support of the public health survey function, PHIRB is involved in the commissioning, managing and publishing of results from departmental funded surveys, such as the Health Survey Northern Ireland, All Ireland Drug Prevalence Survey, Young Persons Behaviour & Attitudes Survey, and the Adult Drinking Patterns Survey.

PHIRB also has responsibility for the management of a programme of patient experience surveys across the Health and Social Care sector.

PHIRB provides support to a range of key DHSSPS strategies including Making Life Better, a 10 year cross-departmental public health strategic framework as well as a range of other departmental strategies such as those dealing with suicide, sexual health, breastfeeding, tobacco control and obesity prevention. It also has a key role in supporting the Alcohol and Drug New Strategic Direction 2011-2016, by maintaining and developing key departmental databases such as, the Drug Misuse Database, Impact Measurement Tool and the Census of Drug & Alcohol Treatment Services, which are all used to monitor drug misuse and treatments across Northern Ireland.

The branch also houses the NI Health and Social Care Inequalities Monitoring System which covers a range of different health inequality/equality based projects conducted for both the region as well as for more localised area levels.

# Census of Drug and Alcohol Treatment Services in Northern Ireland – 1<sup>st</sup> September 2014

This bulletin summarizes information on clients who were receiving treatment for problem alcohol and/or drug as at 1 September 2014. As with previous censuses, the number of clients in treatment was defined as ‘live cases’ where individuals were being treated on a one-to-one basis. These figures may include a small element of double-counting as individuals may be receiving treatment in more than one organisation. It represents a snapshot figure and cannot be used to derive treatment over the entire year.

## Summary

In Northern Ireland on 1 September 2014:

- A total of 8,553 persons were reported to be in treatment for misuse of alcohol and/or drugs.

Of those in treatment for alcohol and/or drugs,

- Almost three-fifths (57%) were males aged 18 and over, a third (33%) were female aged 18 or more and a tenth were aged under 18 (6% male; 4% female).
- Almost half (45%) were in treatment for alcohol only, while a third were in treatment for drugs only and a quarter (24%) were in treatment for both drugs and alcohol.
- Over a quarter of clients (28%) were receiving treatment in the Belfast Trust area, with 23% in the Southern Trust, 18% in the South Eastern Trust, 15% in the Western Trust and 10% in the Northern Trust
- Over half of clients (54%) received treatment through non-statutory organisations, with 42% receiving treatment through statutory organisations
  - The majority (93%) of those aged under 18 received treatment through non-statutory organisations
- The majority of clients (95%) were being treated in a non-residential setting.
- The number of clients in treatment increased from 5,916 at 1 March 2012 to 8,553 at 1 September 2014 (an increase of 45%). Some of this difference can be explained by a higher number of organisations contributing to the Census (70 in 2012; 93 in 2014), however a direct comparison of the 63 organisations that contributed to both the 2012 and 2014 Censuses showed a 30% increase in clients between the two years.
  - The proportion of clients in treatment for alcohol only decreased from 62% in 2007 to 45% in 2014.
  - The proportion of clients in treatment for drugs only also increased from 20% in 2007 to 31% in 2014.
  - The proportion of clients in treatment for drugs and alcohol increased from 18% in 2007 to 24% in 2014.

At 1 September 2014, a total of 8,553 persons were reported to be in treatment for misuse of alcohol only, drugs only or a combination of both.

### Age and gender

Of those in treatment for alcohol and/or drugs, almost three-fifths (57%) were males aged 18 and over, a third (33%) were female aged 18 or more and a tenth were aged under 18 (6% male; 4% female).

### Clients in treatment for alcohol and / or drug misuse by age and gender

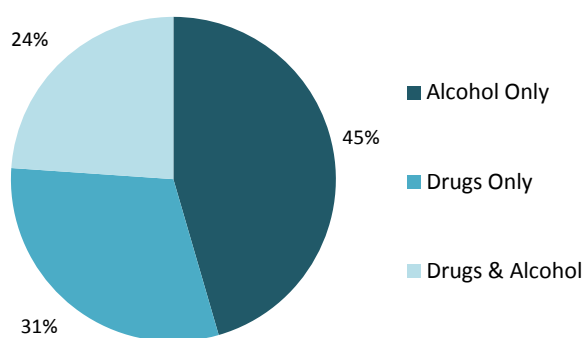

Overall, a quarter of all those in treatment were males aged 18 and over who were receiving treatment for alcohol misuse.

### Treatment type

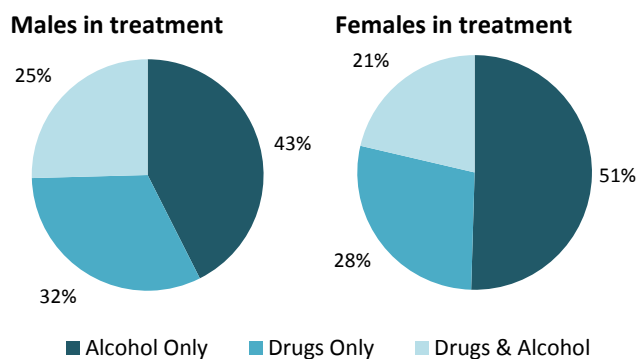

Of those in treatment, almost half (45%) were in treatment for alcohol only, while around a third were in treatment for drugs only and a quarter (24%) were in treatment for both drugs and alcohol.

### Clients in treatment for alcohol and / or drug misuse by treatment type

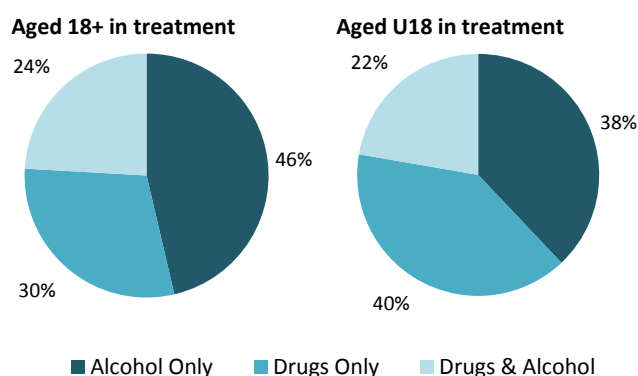

Females (51%) were more likely than males (43%) to be in treatment for alcohol only, while males were more likely than females to be in treatment for drugs only (32% of males compared with 28% of females). A quarter of males (25%) were in treatment for both drugs and alcohol of compared with a fifth of females (21%).

### Clients in treatment for alcohol and / or drug misuse by treatment type and gender

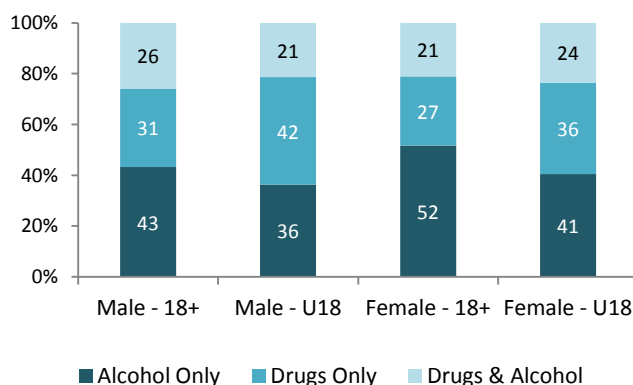

Those aged 18 and over (46%) were more likely than those aged under 18 (38%) to be in treatment for alcohol only, while those aged under 18 (40%) were more likely than those aged 18 and over (30%) to be in treatment for drugs only.

### Clients in treatment for alcohol and / or drug misuse by treatment type and age

Females aged 18 and over (52%) were more likely than males aged 18 and over (43%) to be in treatment for alcohol only. Males aged 18 and over were more likely than females aged 18 and over to be in treatment for drugs only and both drugs and alcohol. There was no difference in treatment type between males and females aged under 18.

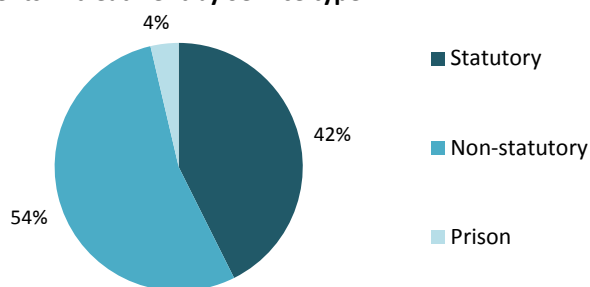

### Treatment type by age and gender

## Service Type

Over half of clients (54%) received treatment through non-statutory organisations, with 42% receiving treatment through statutory organisations and 4% receiving treatment in prison.

Clients in treatment by Service type

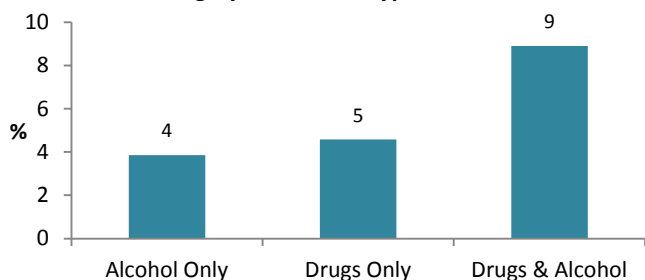

The majority (93%) of those aged under 18 received treatment through non-statutory organisations. For those aged 18 and over, almost a half (49%) received treatment through non-statutory organisations and through statutory organisations (47%).

## Residential Status

The majority of clients (95%) were being treated in a non-residential setting. Those who were being treated for both drugs and alcohol (9%) were more likely to have received treatment in a residential setting than those being treated for drugs only (5%) or alcohol only (4%).

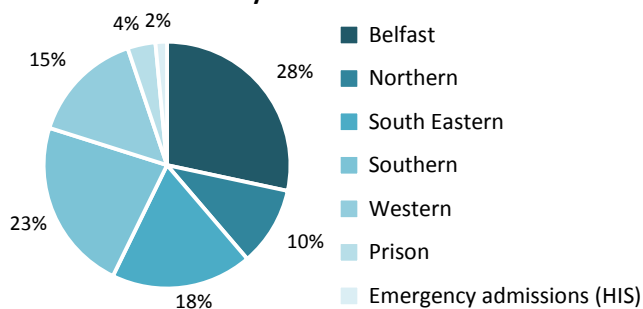

Proportion of clients who received treatment in a Residential setting by Treatment type

## Trust

Over a quarter of clients (28%) were receiving treatment in the Belfast Trust area, with 23% in the Southern Trust, 18% in the South Eastern Trust, 15% in the Western Trust and 10% in the Northern Trust.

Clients in treatment by Trust

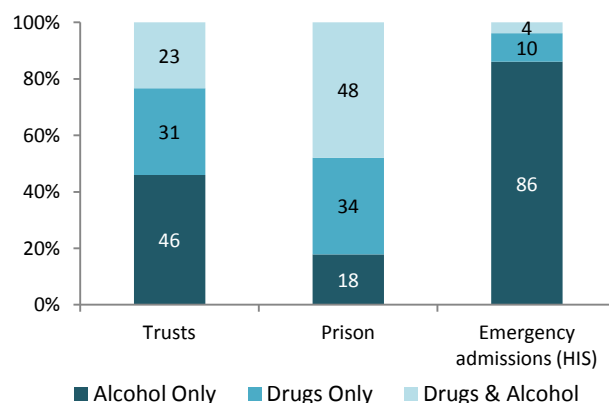

The profile of clients across all Trusts with the exception of the Northern Trust was broadly similar.

Just over one-tenth of clients receiving treatment were aged under 18 within all Trust areas with the exception of the Northern Trust area where 4% of clients were aged under 18.

Around three-fifths of clients were male within all Trust areas except the Northern Trust where three-quarters (74%) of clients were male.

Almost half of clients (46%) who were in treatment within Trusts were in treatment for alcohol only, compared with 86% of those who were emergency admissions on the Hospital Inpatient System (HIS) and 18% of those in prison. Almost half (48%) of clients in prison were in treatment for both drugs and alcohol, compared with 23% within Trusts.

Treatment type by Trust

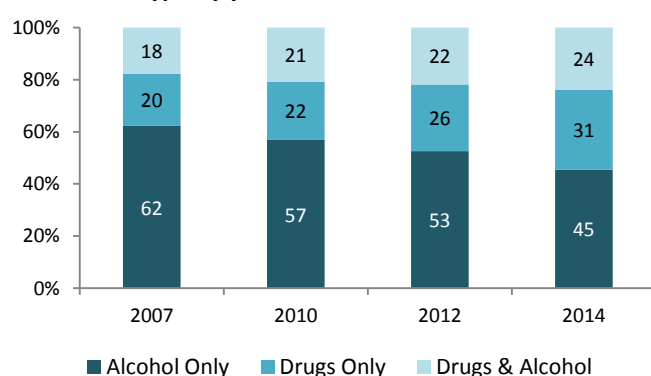

## Comparison with previous years

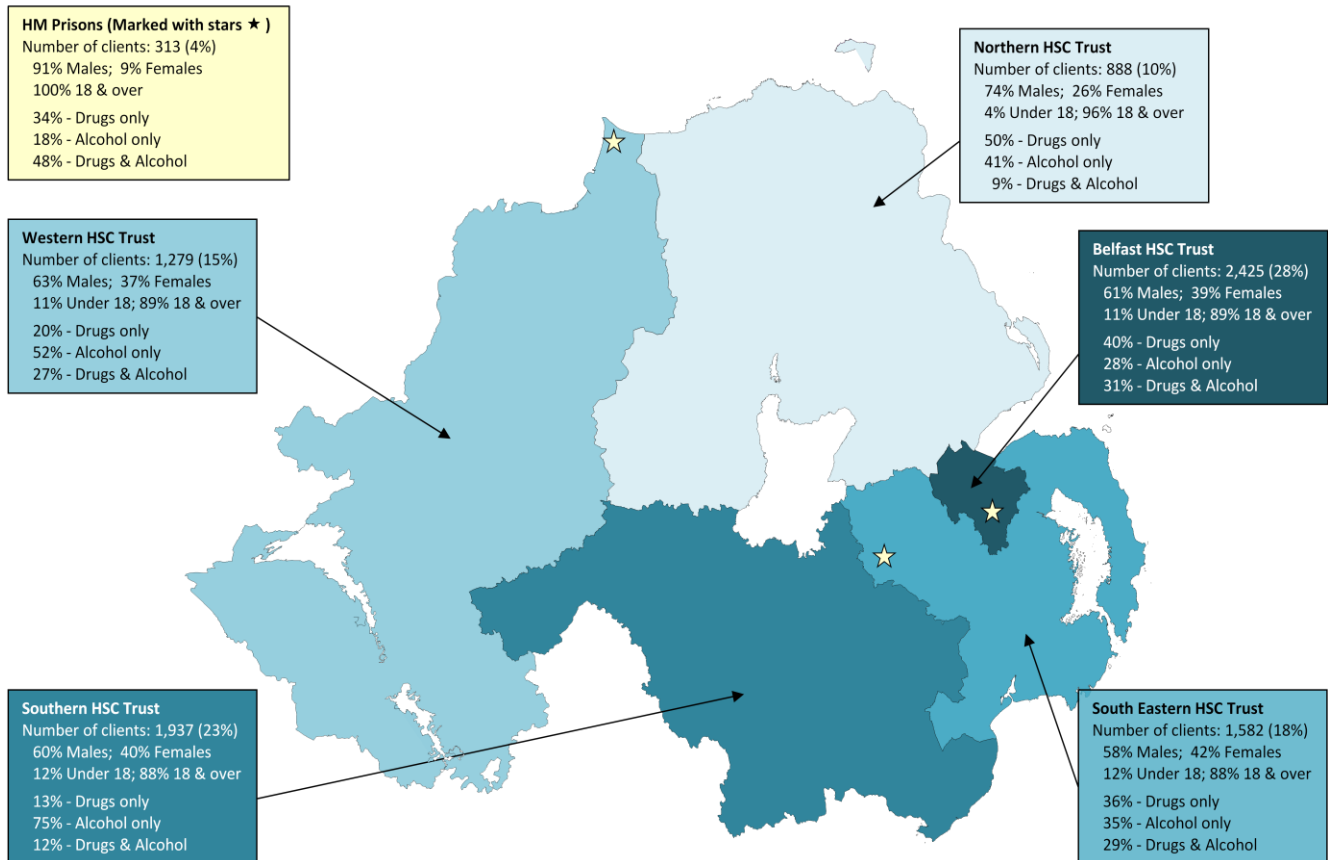

The number of clients in treatment increased from 5,916 at 1 March 2012 to 8,553 at 1 September 2014 (an increase of 45%). Some of this difference can be explained by a higher number of organisations contributing to the Census (70 in 2012; 93 in 2014). The 2014 response rate was 89% of organisations.

The proportion of clients in treatment for alcohol only has decreased from 62% in 2007 to 45% in 2014, while the proportion of clients in treatment for drugs only increased from 20% in 2007 to 31% in 2014 and the proportion in treatment for drugs and alcohol increased from 18% in 2007 to 24% in 2014.

Treatment type by year

### Notes to Tables

1. A dashed line (-) represents a cell count of less than five. This is in order to avoid issues involving personal disclosure, where it may be possible to identify an individual from the data provided. All percentages are rounded to the nearest percentage point.
2. Hospital Information System (HIS) figures relate to the number of emergency admissions to HSC hospitals for only drug-related conditions, only alcohol-related conditions or both drug and alcohol-related conditions, excluding admissions under specialties for mental health and learning disabilities. These figures are as at 1<sup>st</sup> March 2014.
