

European Cancer Inequalities Registry

# Country Cancer Profile 2023

Mark Pearson, Deputy Director of Employment, Labour and  
Social Affairs, OECD

**The burden of cancer in Europe is devastating, and marked with strong inequalities**

# The overwhelming burden of cancer in the EU

There were over 2.6 million of new cancer cases in 2020, equivalent to 1 EU citizen diagnosed with cancer every 12 seconds

Source: European Cancer Information System (ECIS). From <https://ecis.jrc.ec.europa.eu>, accessed on 09/05/2022. © European Union, 2022.

# Cancer mortality rates have decreased over time

But cancer is still the second leading cause of mortality in 2019 following CVD

Source: Eurostat Database.

# Nordic countries are performing better with more gender equity

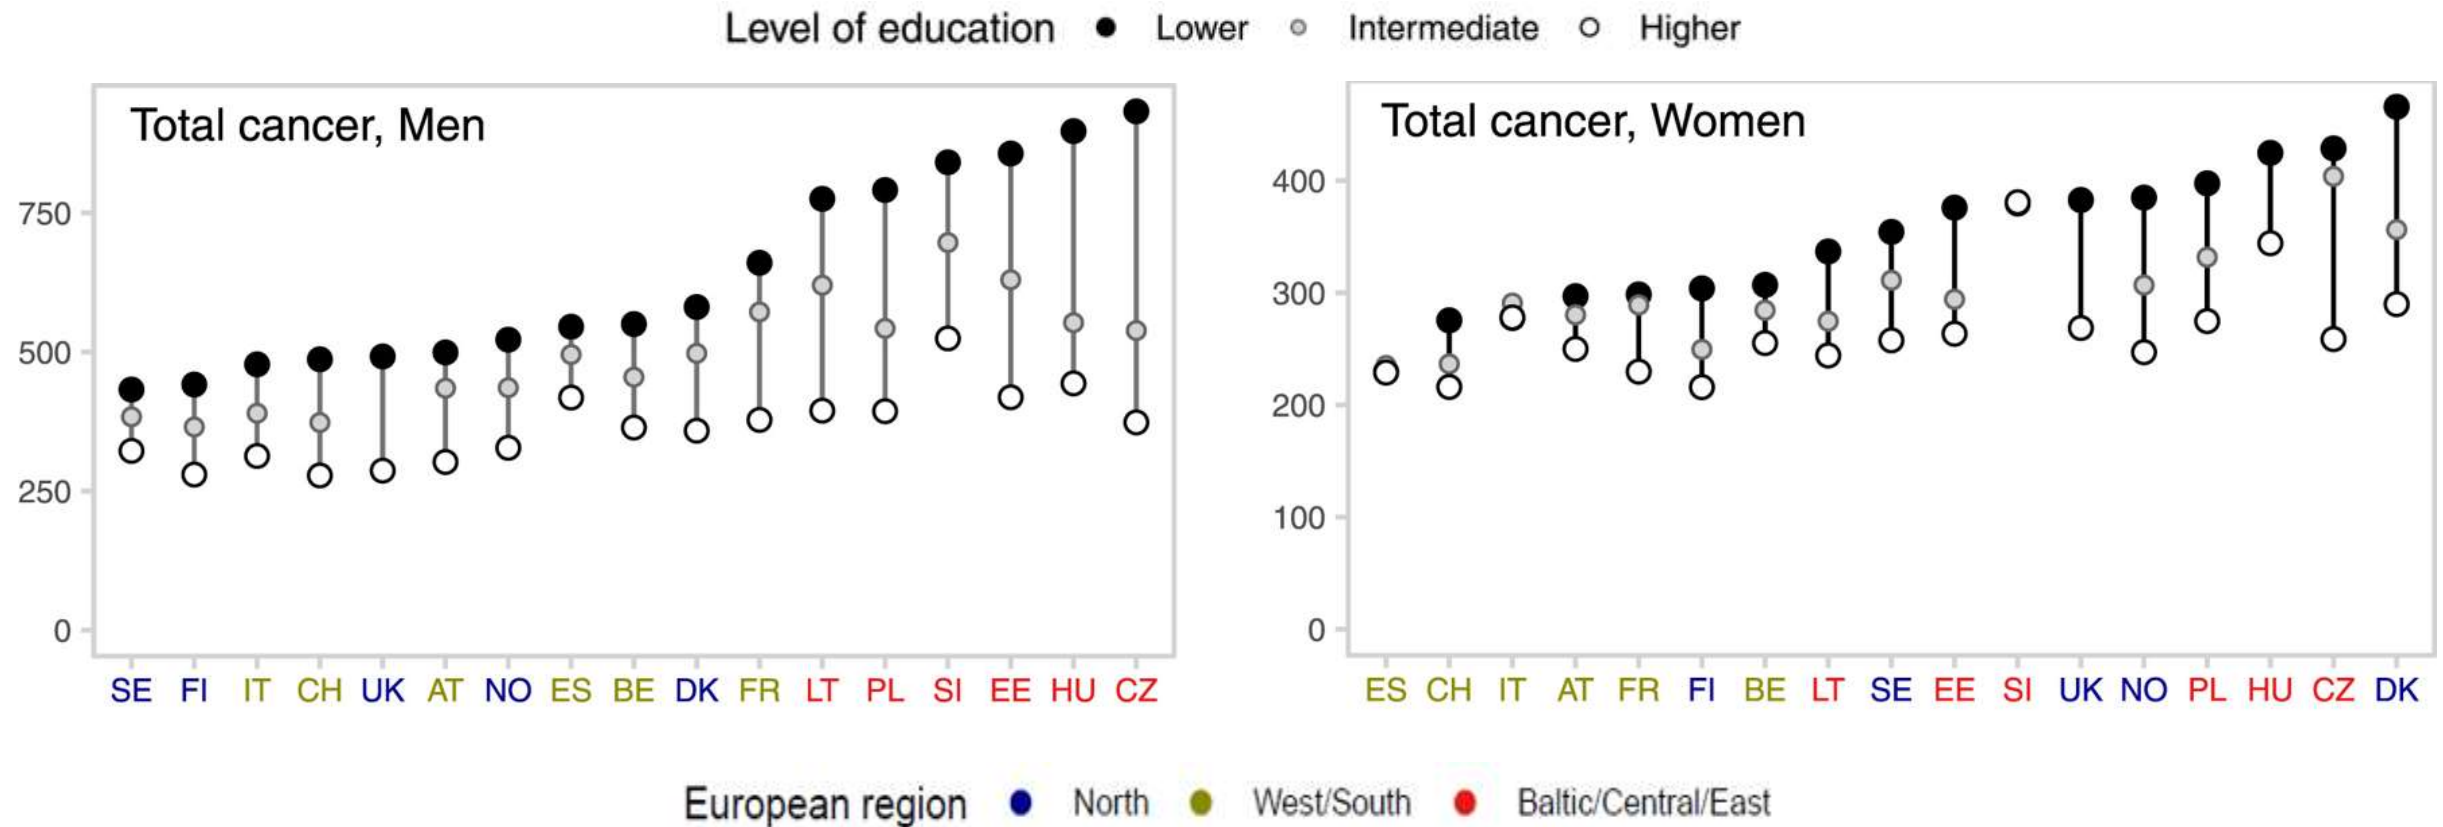

Within countries, cancer mortality rate is almost 75% higher among men than women across EU countries

Source: Eurostat Database.

# Interventions to reduce socio-economic inequalities in cancer mortality should focus on low-educated people

Age-standardised cancer mortality rates per 100 000 population by education

Source: Vaccarella, S. et al. (2022), "Socioeconomic inequalities in cancer mortality between and within countries in Europe: A population-based study", *The Lancet Regional Health Europe*, Vol. 100551, <https://doi.org/10.1016/j.lanepe.2022.100551>.

# What can health systems do?

## 1. Improve prevention

# Smoking is one of the largest preventable risk factor for cancer

Smoking remains more common among low socio-economic status: smoking is 50% higher among low income than high income people in EU countries

Source: Eurostat database, EHIS.

# What can health systems do?

## 2. Improve accessibility

# All EU countries have opportunities to improve access to early diagnoses

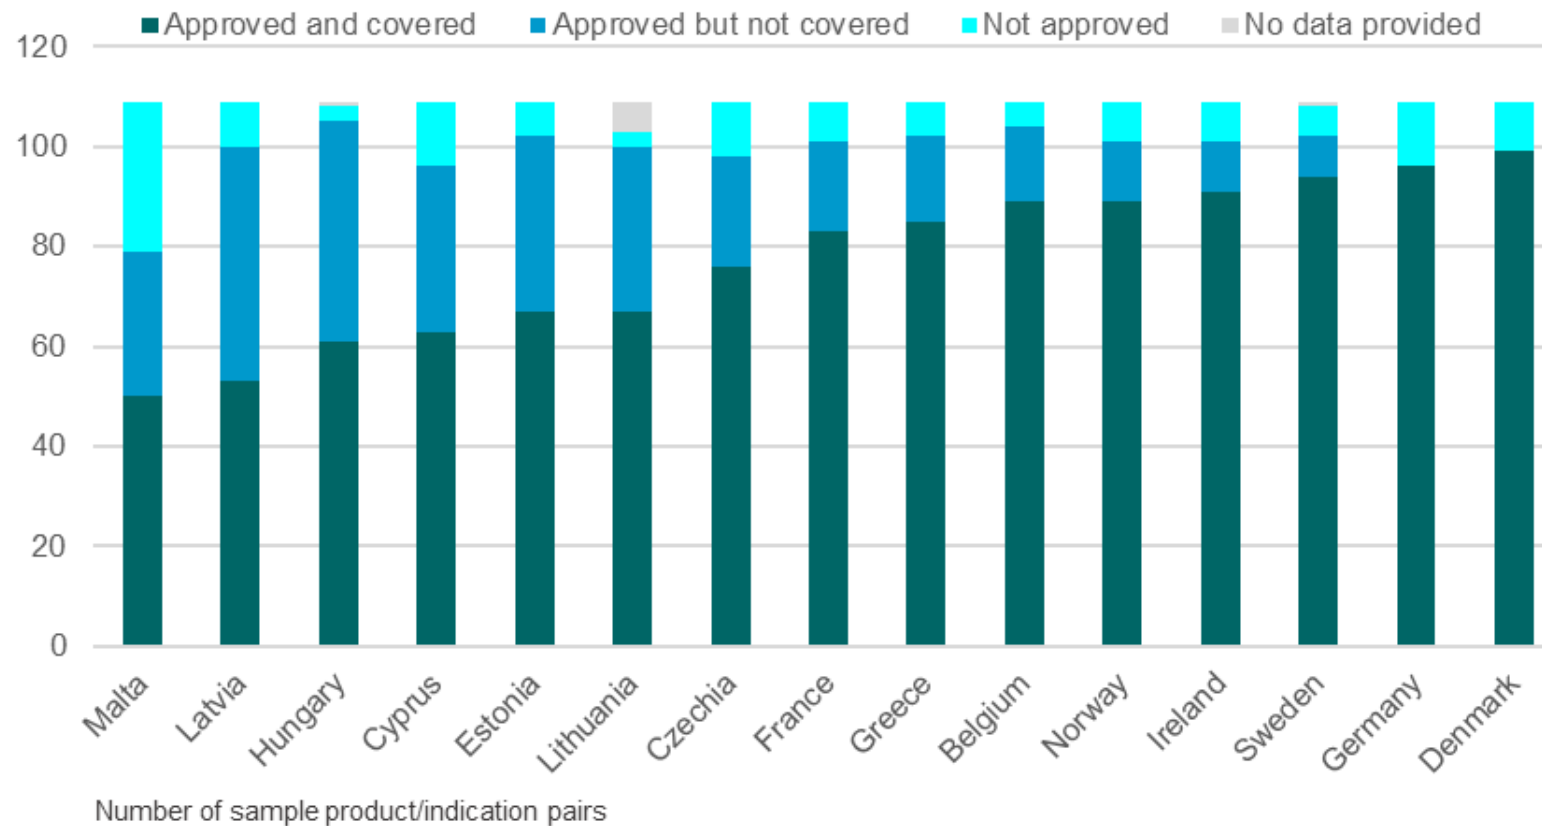

Self-reported participation to cervical cancer screening programmes varies nearly 3-fold across countries and almost 2-fold across education groups in the EU

Source: Eurostat database, EHIS.

# Access to oncology medicines remains unequal across EU countries

Denmark and Germany have the largest number of product/indications approved and covered

Source: Chapman, Paris and Lopert (2020).

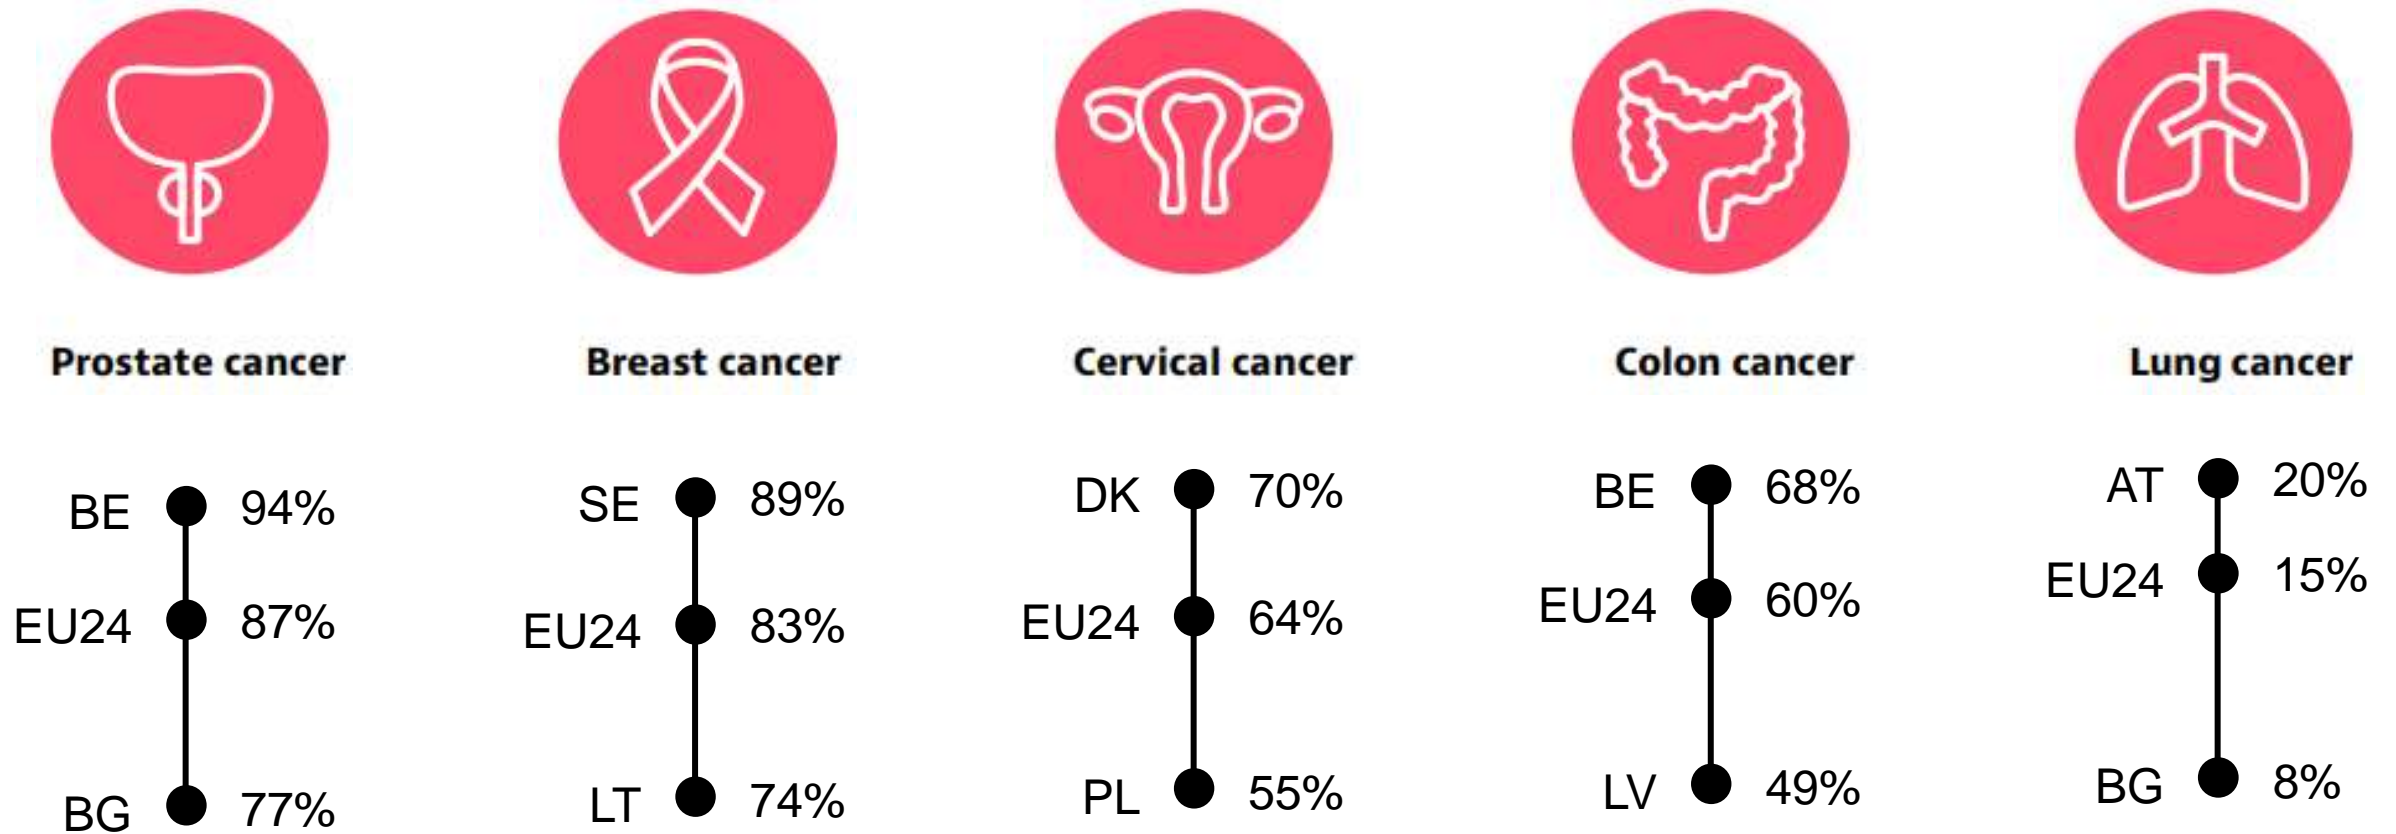

# What can health systems do?

## 3. Improve quality

# Implementing evidence-based practice to promote quality of cancer care

While survival rates have increased in most EU countries, there is still room for improvement in care quality

Note: Data refer to people diagnosed between 2010 and 2014.  
Source: CONCORD programme, London School of Hygiene and Tropical Medicine.

# Measurement is key to inform policy and practice

We only measure, regularly, about half of the data we need

**Risk factors such as smoking and obesity**

**Incidence**

**Cancer screening**

**Stage distribution**

**Hospital utilisation (average length of stay, discharges)**

**Survival and mortality**

**Patient-reported outcomes**

**Resources (e.g. oncologists, radiologists)**

**Spending on cancer care**

**Access to cancer therapy (e.g. authorisation, coverage, waiting time, affordability of cancer drugs)**

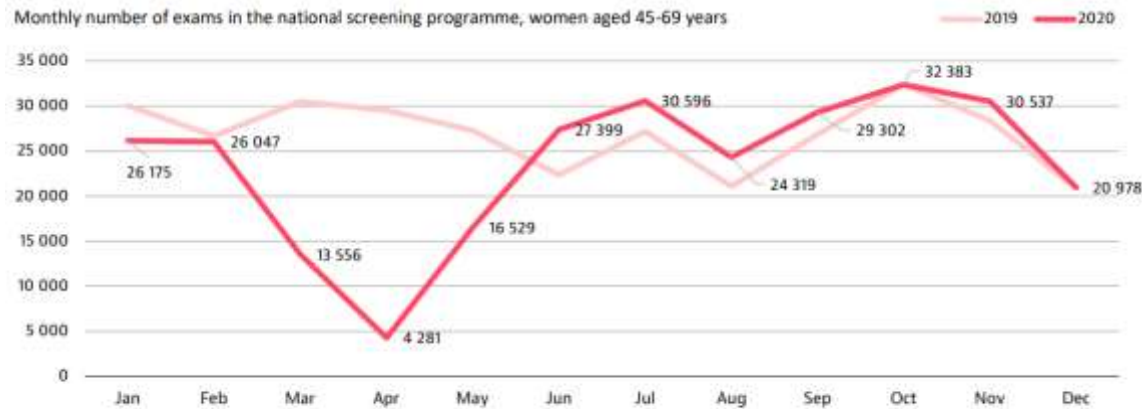

# What can health systems do?

## 4. Improve resilience

# The COVID-19 pandemic had a major impact in disrupting cancer care

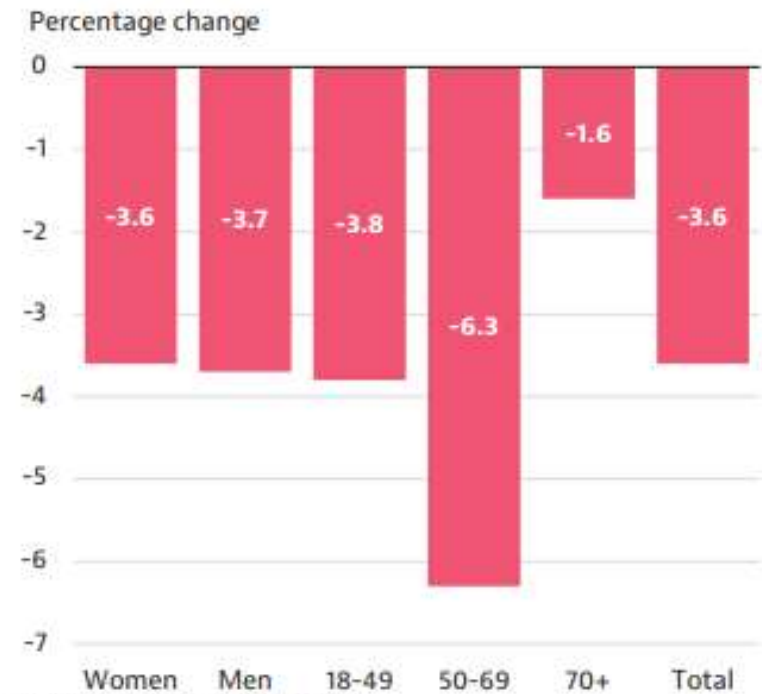

## Decreases in uptake of cancer screening

### Colonoscopy

Poland

# Key findings

## Prevention

Invest in health promotion and disease prevention policies to prevent cancer through comprehensive prevention policies

## Accessibility

Invest in early diagnoses programmes to ensure timely access to cancer care and treatment, and in health workforce to increase recruitment and retention rates

## Quality

To improve cancer quality and address inequalities in cancer care, countries need to collect and use data for monitoring and benchmarking performance

## Resilience

Minimising any disruption in cancer screenings is key to prevent a backlog of undiagnosed cancer patients and improve survival probabilities

# Thank you
