Health Research Board Annual Report 2005

Mission

To improve health through research and information

In 2005 the Health Research Board continued to deliver successful results in line with the objectives set out in the Corporate Strategy 2002–2006:

- To encourage the creation and application of knowledge for health and social gain, the growth of intellectual property and evidence relevant to health and social gain and the emergence of a knowledge-based health system, economy and society
- To be the lead national organisation in relation to support for scientific research for health and social gain, including basic and translational research, health services research, population health and practice-based research
- To promote the growth of a value-added research and development capability in the health system, in partnership with other relevant health organisations
- To impact on health and social policy and services through high-quality research and information
- To be the main advocate for the development of research for health and social gain
- To make the HRB an employer of choice in its field

Professor Anne Scott

School of Nursing
Dublin City University

Professor Bob Stout

Director, Research and Development Office
DHSSPS, Northern Ireland

Chairman's Statement

The year 2005 was a time for consolidation and preparation at the HRB.

An increase of almost a third in the annual revenue grant from the Department of Health and Children meant we were able to consolidate programmes of support for research. In addition to this, Ms Mary Harney TD, Tánaiste and Minister for Health and Children agreed to support the HRB five-year *Investment Programme for Research for Health and Wealth*. This meant that for the first time, the HRB could plan investments to build health research capacity in the medium term.

A major objective of this investment programme is to build world-class capacity in health research, particularly in the clinical area. Ireland has the potential to make a significant contribution at global level to clinical research that will improve patient outcomes. However, this can only take place if the necessary investments are made to support people to do the research, funding is available for their programmes of research and they have access to state of the art facilities and equipment needed to do research at the cutting edge.

During 2005 investments under this programme were made with the appointment of the first two Irish clinician scientists, the establishment of a national imaging centre for health research at St James's Hospital, and support for the

purchase of ultra-sound equipment in all the major maternity hospitals. This equipment will be used to screen expectant mothers to understand the causes of low-birth weight babies. We were pleased that the Industrial Development Authority agreed to work with the successful principal investigators on these infrastructure projects to maximise the impact of the HRB investment with the multi-national imaging industry.

The HRB was particularly pleased to appoint the first two Irish clinician scientists and support their research programmes to the value of €3 million over five years. The objective of the awards is to enable some of our best clinicians to focus on research while still retaining a small clinical service responsibility. I am confident that the award recipients, Dr Joe Keane in TCD/St James's Hospital and Dr Mary Cannon, RCSI/Beaumont Hospital will make a major contribution to advancing knowledge in their respective fields of respiratory disease and mental illness as a result of these awards.

The HRB also participated in or supported a number of initiatives that we know will have positive results in the near future. The most significant was perhaps the partnership with the Wellcome Trust and other funding bodies in the UK to provide support for world-class clinical research facilities that

will benefit human health. The Wellcome Trust/HRB call was issued in July 2005 and results are expected in the middle of 2006.

The HRB welcomes recognition by the economic development agencies – Forfás, IDA and Enterprise Ireland - of the strategic significance of health research and of the Investment Programme in Research for Health and Wealth in the context of their objective of building national research and development capacity. HRB has worked closely with these agencies and the other research funding bodies to develop a framework to support commercialisation of knowledge from research to enhance Ireland's knowledge economy and society. In this context, the HRB welcomed the decision of the newly appointed Science Advisory Council to undertake a review of health research to establish the critical steps needed to strengthen health research capacity in Ireland.

The HRB also worked closely with the Department of Health and Children to prepare the submission on health for the draft *Strategy for Science, Technology and Innovation*, which will form an important building block of the next National Development Programme. The HRB stressed the potential in this country to develop world-class research in health research, in experimental or translational research and clinical research in particular as well as to the contribution of research and high quality information to improve the quality of the health system. The Strategy will be published next year.

The legislation establishing the Health Service Executive gave it a mandate to develop a strong research function in the health service, which the HRB welcomes. To acknowledge the common interest of the HRB and the HSE in developing a strong culture of research in the health service, the HRB hosted a joint meeting of the boards of the HRB and the HSE in October to hear a lecture from Professor John Williams, Director of Research and Development in the Welsh health service on the challenge to developing a strong health research culture in Wales.

The Board was pleased that the CEO, Dr Ruth Barrington, was appointed to the Board of the interim Health Information and Quality Agency, which was established during the year. The interim board has a mandate to prepare for the appointment of the permanent authority, which will be responsible for improving the quality of health and social care, the governance of health information systems and health technology assessment.

I would like to thank Dr Don Thornhill and the members of the international panel who reviewed the operation of the HRB on an organisation wide basis in 2005. Their analysis of the environmental factors shaping the HRB, their understanding of HRB strengths and their stretching recommendations for the future development of the organisation were invaluable and will form an agenda for change in the HRB in the coming year.

The ongoing support and dedication of my fellow Board members must be acknowledged. As part of their commitment to excellence and in the context of the wider review of the organisation of the HRB, the Board in 2005 reviewed its operations to ensure that it was contributing maximum value to the achievement of objectives of the HRB. The review highlighted a number of ways that the Board could maximise impact with the time they have available and some changes were made to ensure the Board focus more on strategy and policy.

The commitment and professionalism of the staff of the HRB was demonstrated yet again in 2005. I would like to thank them for their hard work and support during the year and look forward to working with them again in 2006.

Professor Desmond Fitzgerald, FRCPI
Chairman

Chief Executive's Report

The Health Research Board had a highly productive year in 2005.

Mary Harney TD, Tánaiste and Minister for Health and Children, agreed to make €50 million in capital available for an investment programme in research for health and wealth over five years, beginning in 2005. This was in addition to a significant increase in the Department of Health and Children's annual revenue grant to the HRB. These increases allowed the HRB to increase the volume and range of its support for research and information systems.

A decisive step was made to partner the Wellcome Trust in the Clinical Research Initiative for the United Kingdom and Ireland. This will help meet a major long-term objective of the HRB to establish a network of clinical research centres which will link the university medical schools and their academic hospitals in undertaking research that will improve outcomes for patients.

The appointment of the first two HRB clinician scientists also marked a major advance in strengthening capacity in clinical research. The HRB is committed to funding many more of these posts, but is constrained by the existing terms of the current medical consultant contract and the long delays in agreeing changes to that contract.

Medical education was the centre of attention in 2005. I was a member of the Postgraduate Medical Education and Training Group, chaired by Dr Jane Buttimer, which reported during the year. The recommendations of the Buttimer Report have significant implications for the training of medical graduates, and for the way in which the HRB currently supports those who are committed to gaining expertise in research. The Report recommends that the HRB support structured PhD programmes. The publication of the Report coincided with an evaluation of the HRB clinical research fellowship programme by a review group established by the Board. The work of this group is leading to significant changes in the way HRB supports clinical research training for medical graduates.

A highlight of the year was the HRB-sponsored lecture, 'It takes two to tango', delivered at the Royal Irish Academy in February by Professor Jonathan Lomas, director of the Canadian Health Services Research Foundation. The subject of the lecture was knowledge brokering – bringing policy makers and researchers together. Professor Lomas gave examples of how knowledge brokering between health policy

makers and researchers operates in his own organisation in Canada, indicating both the challenges and the rewards in building contacts between these two groups.

The HRB and the Northern Ireland R&D Office published a consultation paper on the proposed all-island GeneLibrary, which will be a vital resource for researchers. Under this proposal, 10,000 volunteers on the island of Ireland would agree to contribute their medical history and a blood sample for the purposes of establishing a unique control sample of the population. Once information from the medical history and the blood sample are matched, the record would be irreversibly anonymised. Consultation with the research community began with a seminar which examined the value and scope of the proposal, and was still in progress as the year ended.

The HRB is committed to supporting research on global health challenges, particularly on poverty-related diseases that take such a toll of human life in developing countries. The HRB was pleased to agree a Memorandum of Understanding with Irish Aid whereby the HRB will organise calls to the research community for proposals linked to objectives of Irish Aid. The HRB will administer these awards and Irish Aid will fund the programme. The first Global Health Research awards will be made in 2006.

During the year, the HRB played a significant role in co-ordinating policies and operations among research funding bodies and economic development agencies. The Research Funders' Forum is helping

to increase coherence among the research funding bodies. The HRB was also involved in an initiative led by Enterprise Ireland to develop the agreed framework for commercialisation of intellectual property funded jointly by industry and public bodies. I joined the Medical Technology Council established by the Irish Medical Devices Association to assist in co-ordinating efforts to support a research-friendly environment for the development of medical devices.

The HRB continued to monitor the implementation of the EU Clinical Trials Directive, and expressed its concern to the Department of Health about the difficulties the implementation of the national regulations was causing for clinical trial activity in Ireland.

At European level, I chaired the working group of the European Strategy Forum charged with developing a priority list of research infrastructures for biology and medical science to be included in the first European roadmap for research infrastructure, which will be published in October 2006. This list was presented to the Commissioner in April 2005 and was later included in the Commission's proposals for the Seventh Framework Programme, the European Union's main instrument for funding research and development, that were subsequently adopted by the Council of Ministers.

The research and information programmes which are conducted at the HRB had a number of successes in 2005:

- The HRB was invited by the Government to develop and maintain a Drug-Related Deaths Index.
- The HRB published the first report from the National Physical and Sensory Disability Database, providing the first comprehensive information on the services requirements of the population with such disabilities.
- The HRB launched the first study of levels of psychological stress in Ireland.
- The HRB undertook to commission research studies on the impact of demographic change on demand for health services and on a resource allocation model for the Irish health system. The research will be commissioned in partnership with the Health Service Executive.
- Based on its extensive research on the role of folic acid in preventing neural tube defects in children, the HRB made a submission to the National Committee on Folic Acid Food Fortification strongly recommending that the Government make it mandatory to fortify staple foods such as flour with folic acid at a level that international research has shown to be effective in preventing these devastating disabilities in children.

A major challenge for the HRB in 2005 was the review of the entire organisation to establish the extent to which it was delivering on the objectives of the corporate strategy 2002–2006 and to help formulate a programme of quality improvement for the future.

The review involved a self-assessment exercise against a European standard, stakeholder and staff surveys, a review by the Board of its performance, and a visit over three days by a panel of national and international experts in research funding, health information systems and organisational development. The panel's report confirmed the HRB's success in achieving its corporate objectives but commented on the urgent need for a new strategy to adapt to the rapidly changing external environment. It recommended significant changes in the way the organisation is structured to enable the HRB to cope better with the challenges facing it.

I would like to thank the members of the Board and the staff for the enthusiastic manner in which they embarked on this innovative and demanding review project. I am most grateful to the members of the external panel, chaired by Dr Don Thornhill, for the skill and expertise that they brought to the task of assessing the performance of the HRB and making recommendations for the future development of the organisation.

I would like to extend my thanks and appreciation to the Chairman, Professor Desmond Fitzgerald, and to the members of the Board for their excellent leadership of the organisation and for their commitment to developing the capacity of the HRB to support research and information systems of the highest quality.

Ruth Barrington PhD
Chief Executive

Research funded by the HRB

The HRB funding allocation from the Department of Health and Children increased in 2005. Capital funding of €50 million was also committed by the Department for the period 2005–2009 to support the Investment Programme in Research for Health and Wealth. This meant that the HRB was well placed to support capacity building and infrastructure.

The HRB proposes to use this additional funding in a strategic way to strengthen clinical research and build research and development capacity in the health system. The aim is to harness research to produce better patient outcomes and improved health in the population. Initiatives funded will also contribute to more effective and marketable diagnostics, pharmaceuticals and information technologies.

New and innovative awards were introduced throughout the year to meet these objectives. Awards worth €3 million were made to clinician investigators – medical consultants who focus on world-class research in areas that will have direct benefits for patient care. There was additional investment to support research programmes directly linked to the objectives of the health service. Further funding was also allocated to increase national capacity in imaging equipment for

health research and to develop an initial proposal for an all-island GeneLibrary which will contain a large body of samples for genetic research.

The HRB continued to support existing grant programmes that have proven successful and yielded excellent results. A new research funding online newsletter, *Research Funding News*, was introduced, which features detailed information about upcoming programmes and success stories.

Funding awarded

Funding provided under *science for health* supports investigator-led research in the health, life and social sciences that improves our understanding of health and disease and contributes to the discovery of improved therapies. The HRB provided 108 research awards across nine schemes in 2005 from a total of 598 applications received. A further 107 awards were made to build capacity through student summer schemes and science writing workshops.

A total of 125 peer-reviewed publications based on HRB funded research were published in 2005.

A number of other successful initiatives were also supported.

HRB scholars were literally climbing walls to celebrate the success of their PhD training schemes and the announcement that the HRB will provide additional funding to develop new HRB scholar sites for PhD training. The decision to underpin the new sites was based on a successful evaluation of an existing HRB scholar site in Trinity College Institute of Neuroscience. Institutions will be invited to apply in 2006 to establish HRB scholar sites which will focus on biomedical and clinical sciences, health services research or epidemiology and public health.

Dana Kilroy and Kevin Murphy,
Institute of Neuroscience TCD

CASE STUDY

New links between medical research and patient care

The new awards to support medical consultants in undertaking world-class research in areas that have direct benefits for patient care are the first of their kind in Ireland. Two awards, worth a total of €3 million, were presented to the new Clinician Scientists by the Tánaiste and Minister for Health and Children, Mary Harney, in May 2005. Both recipients are consultants who have developed a strong research interest in their specialised field, guided by their experience of patient care and the most recent information about emerging trends.

Dr Mary Cannon, a senior lecturer in RCSI and a consultant in Beaumont Hospital, will investigate the onset of schizophrenia in young adults. The project will monitor the brain development of at-risk young adults using a variety of imaging techniques and psychological assessments with a view to improving early detection and prevention.

Dr Joe Keane, a consultant in respiratory medicine at St James's Hospital in Dublin, will focus on new ways to prevent and

treat tuberculosis. This is a chronic lung disease, which claims the lives of two million people worldwide each year. The incidence of this disease has increased in Ireland since 2003.

Speaking at the launch of the awards, the Tánaiste said that, to realise the benefit of the millions invested by the Government in research in the life sciences, in biotechnology and in developing this country's research infrastructure, we must improve links between the laboratory and the delivery of patient care. She believes that these awards will succeed in forging these links, as well as in raising the profile of Irish health research and improving patient outcomes.

Prof Des Fitzgerald, Chairman, HRB, Dr Mary Cannon, RCSI, Dr Joe Keane, St. James's Hospital

The third issue in the HRB's Picture of Health series, *A Picture of Health: A selection of Irish health research 2005*, was published during the year. Building on the success of past issues, it effectively promoted the key research outcomes from the project grants completed during the year. This popular presentation of research findings continues to help make health research relevant to a broader audience.

Participation in the BA Science Festival 2005 was a further opportunity to bring health research issues to the general public. The HRB joined forces with the British Council to host a public debate on alcohol, *Sláinte: To our good health?* An expert panel from around Europe, chaired by Brian Dobson from RTÉ, posed questions such as: Has our culture of hard drinking spun out of control? if so, should we be concerned? Can taking alcohol in moderation be good for your health? The lively debate included participation by the audience of industry experts, researchers, public health representatives and the general public.

Funding offered under *R&D for health* is targeted at developing a structure within the health system to support research and development that will encourage the application of knowledge to health problems and increase the effectiveness of the health system in achieving its goals. Given the changes under way in the HSE in 2005, it is important to build new relations and continue to keep the support for research active in the health services.

Based on the success of the Health Services Research and Development awards in 2004, a second call was issued to encourage further capacity building in R&D within the health services. A total of 27 proposals were received and five awards were made for projects that are specifically linked to the goals and priorities of the health strategy.

Working in co-operation with the Medical Research Charities Group (MRCG), the HRB launched a new scheme to help tackle

rare disease. A total of €600,000 will be awarded to three research fellows to help increase knowledge and build research capacity, leading to improved treatment and care for people suffering from a rare disease in Ireland. Rare diseases are classified as life-threatening or chronically debilitating diseases that affect fewer than five people in every 10,000. Examples of rare diseases in Ireland are cystic fibrosis, muscular dystrophy and epidermolysis bullosa.

The HRB also signed a Memorandum of Understanding with Irish Aid to work collaboratively to support global health research and to increase research capacity in developing countries. This award scheme aims to generate high-quality research evidence directly related to the policy areas of the Irish aid programme and to build research capacity in developing countries. It will promote international partnerships in global health research, with particular emphasis on collaborative projects involving Irish research institutions.

Evaluation of research programmes

Evaluation is essential to ensure that the funding invested meets the objectives and achieves value for money. Among the reviews carried out by the HRB in 2005 were the mid-term review of the five-year programme grants and progress reviews of the PhD scholar sites and the career development schemes, with a special focus on the clinical research training fellowship scheme. A working group is being established to consider detailed recommendations following the review of the clinical research training fellowship scheme.

Review of ICORG

Since 2002, the HRB has invested €9 million in building a strong infrastructure for clinical trials in ten hospitals, all members of the All-Ireland Cooperative Group.

An additional €0.6 million was awarded in the form of a planning grant to ICORG, the Irish Clinical Oncology Research Group. ICORG acts as a central support office for the All-Ireland Cooperative Group of hospitals, supporting the initiation and conduct of cancer clinical trials in the hospitals and working with Irish investigators and organisations worldwide to increase the number of clinical trials available to cancer patients across the island.

During 2005, all components of the All-Ireland Cooperative Group were assessed, including trial activity in the hospitals and progress made with the planning grant application to ICORG for centralised support. The assessment panel acknowledged that ICORG had made progress in a number of areas and suggested that the group increase the number and type of trials available to cancer patients across the country. ICORG conducted a review and will deliver a response in early 2006 outlining their actions to tackle the changes proposed by the panel.

Table 1 Summary of funding awarded in 2005

Award schemes 2005	No. of applicants	No. of awards
Career support schemes		
Clinician Scientist Awards	13	2
PhD Training Sites	17	2
Post Doctoral Fellowships	45	8
Clinical Research Training Fellowships	43	8
Fellowships in Health Services Research	24	4
Clinical Research Fellowships in Nursing and Midwifery	19	4
NCI Summer Curriculum	20	17
Cancer Prevention Fellowship	1	1
Cochrane Fellowships	10	6
Summer Students	117	46
Research grants		
Project Grants – General	310	75
Programme Grants	36	3
Partnerships Awards	23	10
Strategic R&D Awards	27	5
Rare Diseases Research Awards	7	3
Infrastructure		
Imaging Awards	5	2
Health Information Systems Awards	20	6
Training and workshops		
HRB / British Council science writing workshops	101	60
Grant writing workshops	150	150
Cochrane three-day course on systematic reviews	73	39
Total	1061	451

Building capacity for health research

In 2005, the HRB led a number of support schemes for researchers and health professionals and provided seminars and courses to build capacity by supporting careers, training and infrastructure.

A new call was issued for four career development schemes which will be funded in 2006. Applications have been submitted and are currently undergoing peer review.

Science writing workshops continued to be popular. They help researchers develop skills in writing up their research in an effective way. One workshop this year was hosted with the British Council and the other with the national Alimentary Pharmabiotics Centre in University College Cork.

In an innovative approach to developing research capacity in the health services, the HRB hosted a series of workshops for people interested in doing such research. The purpose of these workshops was to highlight funding opportunities and to provide advice on how to apply successfully for funding.

The Cochrane collaboration began to pick up pace with the launch of another call for Cochrane fellowships, a series of three-day courses on conducting systematic reviews, and preparations for the World Cochrane Colloquium in Dublin in 2006. Irish researchers continued to enjoy the benefits of free access to the Cochrane Library with 124,255 users in 2005.

Working in partnership

A new working relationship was formed with INSERM, the French health research agency. Initial meetings resulted in a survey being conducted of all collaborations between researchers funded by the HRB and researchers in France. Initiatives being considered for 2006 include setting up an exchange programme between the two sets of researchers.

The Ireland–Northern Ireland–National Cancer Institute Cancer Consortium. Calls were developed and advertised for joint research fellowship schemes, the cancer prevention fellowship scheme and the summer curriculum in cancer prevention. Work continued in endeavour to highlight the key challenges to the clinical trials network.

The HRB agreed a common approach to funding policies in terms of the Protection of Employees (Fixed Term Work) Act and maternity leave for researchers, in collaboration with other agencies through the Standing Committee of the Research Funding Bodies.

The HRB is working with the Wellcome Trust to introduce a major new initiative to support key clinical research infrastructure in Ireland. The Irish strategy for health research, *Making Knowledge Work for Health*, identified clinical research facilities as a priority for building health research capacity in Ireland. The HRB and the Wellcome Trust have a strong track record of providing high-quality clinical research environments and building capacity. During 2005, the HRB and the Wellcome Trust invited proposals in two related areas:

- The development of new and existing clinical research facilities.
- Support for enabling technologies/ infrastructure for clinical research.

This is an exciting development for the research community and for health in Ireland. Results of the peer-review process will be announced in July 2006.

National Information Systems

The HRB manages five national information systems which provide quality information for the planning, monitoring, and evaluation of health services disability, drug misuse and mental health. These information systems also provide an invaluable source of information for further research. The HRB plays a vital role in the organisation and development of the information systems, ensuring valid and reliable data, analysing and reporting the data and disseminating the information to relevant stakeholders.

The restructuring associated with the establishment of the Health Service Executive (HSE) presented a new challenge for the information systems divisions in 2005. Data from the previous year had been submitted from the original health boards, but had to be reported to reflect the new structures in place. This challenge was dealt with effectively and software was updated to reflect and report through the new HSE structures.

Some of the major developments in 2005 included:

National Physical and Sensory Disability Database (NPSDD)

The first annual report of the NPSDD Committee was published, containing information collected in 2004. This data was analysed and will be used as an indicator to inform service planners of the needs of people with physical and sensory disability nationwide.

An action plan was developed in response to the evaluation of the NPSDD. This was a useful exercise as it brought together various stakeholders who identified priorities for improvement.

The HRB made significant contributions to the publication of international classification of functioning and devised the 'Measure of Ability and Participation'. The Economic and Social Research Institute will take the national aspect of this project to the next stage.

A user manual was developed for telephone updating of NPSDD registrations and training was provided to people who will use the system.

CASE STUDY

First National Physical and Sensory Disability Database Report

The NPSDD was established to ensure that information is available to enable the Department of Health and Children, the HSE and the non-statutory sector to provide appropriate services designed to meet the changing needs of people with a physical or sensory disability. The database is intended to provide a comprehensive and accurate information base for decision making in relation to the planning, funding and management of services for people with a physical or sensory disability and, for the first time, to set priorities based on an objective evaluation of the needs of the population receiving or requiring specialised health and personal social services.

Progress towards reaching the target number of records on the database in 2004 was good. From the data it is possible to find out the gender, age profile, accommodation needs, services currently provided and services required for the population registered on the database. This information is essential in planning services for the future.

National Intellectual Disability Database (NIDD)

The NIDD Annual Report was published ahead of schedule, in September, meaning that decisions about service provision in 2006 can be based on the most up-to-date information available. Regional bulletins were produced to ensure that each HSE area could clearly identify key findings and requirements for their area. The national competition to design the cover of the annual report was again an outstanding success, with more than 300 entries from service users nationwide. The winner was Francis Gleeson from Nenagh who is actively involved in Ormond Resources,

where he produces arts, crafts and candles as well as painting.

New NIDD software is now installed in more than 100 sites. Multiple users at each site were supported throughout the implementation process and during the course of the year. A documentation resource was developed within the NIDD software and materials were uploaded in December. This means that support materials and regional analysis of data will be possible for users online.

Throughout the year, training was provided to encourage and support the regional use of both disability databases and to ensure that users could produce reports and interpret the information effectively. A protocol was introduced for access to these two databases at national and regional levels to maximise security of information.

National Drug Treatment Reporting System (NDTRS)

From the start of the year, existing participants in the NDTRS began submitting their data for 2005. This will bring the records of the databases up to date and will mean that the HRB can collate, analyse and report on the information gathered in the same year. This is extremely useful for identifying areas of need and furnishing service providers with the most recent information available to inform decision making.

A proactive approach was taken to developing participation in the NDTRS, which will help ensure more complete datasets. This, in turn, will give a more accurate picture of treated drug use in Ireland.

Collection of 2004 data at outpatient, inpatient and low-threshold services was almost complete by 2005. Following a concerted effort to encourage general practitioners to participate, significant progress was made during the year in collecting data for the years 2001 to 2004.

Prison services will report to the NDTRS from 2006 onwards and HRB staff are in the process of developing a database to facilitate this. Negotiations are under way with alcohol services in Dublin, Kildare and Wicklow with a view to their providing information about people presenting for treatment from 2005; these discussions are progressing well.

In 2004, an access database was developed to enable direct data entry from the centres providing a service to people who present for treatment for drug misuse. During 2005, research analysts, trained data co-ordinators and service providers in coding and entering the data at source.

Three reports based on information from the NDTRS were published during the year. These reports looked at trends in treated drug use in Ireland from 1998 to 2002. They showed that 33,350 people aged between 15 and 64 years were treated for problem drug use in Ireland. The reports compared trends in the numbers of cases in Dublin, Kildare and Wicklow (the greater Dublin area) with those in the rest of the country. They revealed that, while the number of new cases in the greater Dublin area decreased between 2000 and 2002, the number of new cases outside this area increased by 300% between 1998 and 2002. The reports also highlighted the risk behaviours associated with drug use, including polydrug use, which can lead to overdose, and injecting drug use, which is linked to acquiring blood-borne viruses.

Working closely with key Irish agencies and using information from the NDTRS, staff helped to address the priority information needs in the area of drug misuse in Ireland. Staff also had an active role on the National Advisory Committee on Drugs.

National Psychiatric In-patient Reporting System (NPIRS)

NPIRS data was successfully submitted by all in-patient psychiatric units and hospitals on a quarterly basis. The HRB provided

ongoing software support through the HRB PAS database, as well as by regular liaison with hospital staff who work with the system. Promotional efforts continue to encourage hospitals and units to submit data to NPIRS electronically.

Data collected by NPIRS was used to produce a detailed annual report on all psychiatric admissions and discharges in Ireland during 2004. As part of a customer service initiative, an evaluation questionnaire based on the annual NPIRS report was included in this year's report. The recommendations arising from this survey will be incorporated into future publications.

Information from the database was also used to produce regional bulletins specific to each HSE area twice a year. These help to facilitate decision making in relation to service provision at a local level.

Performance indicator reports were produced for the HSE areas and the Department of Health and Children. These quarterly reports provide comparable data for each local health office (LHO) in terms of admission, legal category, diagnosis and length of stay of all acute psychiatric in-patients in Ireland.

Community Care Database

In response to changing patterns of patient care, the HRB has developed a new database called COMCAR, designed to record mental health activity at community care level. The COMCAR database is now in use at eight locations around the country. The database has been customised to user needs and specific versions have been created for out-patient clinics, day centres, day hospitals, liaison psychiatry and old age psychiatry. This work has been crucial in guiding ongoing work on the new web-based national mental health information system. The COMCAR team is working closely with the HSE on a pilot project planned for Donegal.

Research conducted in-house

Child Health

The child health work programme has focused around the collaborative research programme with the National Institute of Child Health and Human Development (NICHD) and Trinity College Dublin (TCD) on congenital malformations and other adverse pregnancy outcomes.

Based on last year's groundbreaking research that showed the relationship between folic acid and risk of neural tube defects (NTDs) in pregnancy among the Irish population, the HRB made a submission to the National Committee on Folic Acid Food Fortification to emphasise the importance of fortifying a staple food, like flour, with folic acid.

The same findings, which were part of a collaborative study with Trinity College Dublin and the National Institutes of Health in the US, provided the scientific evidence for an advertising campaign by the Food Safety Authority of Ireland to encourage women of childbearing age to take folic acid supplements in their diet, whether they were intending to become pregnant or not.

Eight papers on related research were published in international journals and two papers were presented at an international meeting on neural tube defects in London.

Mental Health

Family support study

A new study was undertaken to explore the experiences, needs and support requirements of families with direct exposure to mental illness. The study involved semi-structured interviews with 40–50 people who were close relatives of a person with an enduring mental illness (defined as an illness lasting for more than two years and requiring ongoing visits to a mental care service).

The research aims to find out what supports are currently available to families, whether families use them, if they are satisfied with them, and what other supports are needed. This information can then be used to inform service providers and policy makers so they can design effective services for families who support people with illnesses such as schizophrenia and depressive disorders.

Psychological distress – do we use services or seek help?

A new survey of psychological stress in a random sample of the Irish population aims to find out how many people suffered from psychological distress in the previous 12 months, whether they availed of a service for their problem and whether they would be willing to seek help for psychological problems in the future.

The HRB has commissioned the Economic and Social Research Institute to carry out the survey by telephone. Results will be available in 2006 and it is hoped that they will provide sufficient information for service planners to design early intervention programmes to prevent or reduce psychological distress.

Drug Misuse

The illicit drug market

The impact of drug use and drug markets can affect people's physical and psychological health. It is important to research the potential impact that this can have. Examining drug crimes and markets, it is possible to identify ways to help disrupt drug markets which would in turn reduce the potential impact they have indirectly or directly on health.

During 2005, the HRB published new research on the illicit drug market in Ireland. The research pulls together information from existing data sources and research on illicit drug markets. It identifies trends over time and highlights knowledge gaps. The research found that the drug market continues to grow in spite of huge global investment to eliminate it. Based on a commonly used estimation that the amount of drugs seized represents only 10% of the total imported, the combined estimated market value in Ireland for cannabis resin, ecstasy, cocaine, heroin, amphetamines, cannabis and LSD was €650 million in 2003.

The report reviews data from the Garda Síochána, the customs authorities, the Forensic Science Laboratory and drug users themselves. The author concludes that, because this data is collected by a variety of groups, each for their own purposes, there are gaps in the information and a lack of consistency in processes. The research points to the need for all the data to be compiled and researched annually in order to improve our understanding of how the drug market works. This, in turn, would make it possible to identify how the market could be disrupted and to monitor the effect of law enforcement efforts.

CASE STUDY

Drug-related deaths in Ireland

The HRB published the first comprehensive overview of drug-related deaths in Ireland in June 2005. This review, the first issue in the HRB's Overview series, analyses data collected from a variety of sources* in Ireland between 1990 and 2002. The trends identified show a substantial increase in drug-related deaths between 1995 and 2000 from 43 to 119, falling in 2001 to 88, with a small rise in 2002, to 91. This pattern reflects trends in Europe.

To date, deaths as an indirect result of drug use are not systematically documented and have been assessed only in localised studies within Dublin. The findings of the Overview indicate an underestimation of opiate-related deaths in Dublin and a lack of information about deaths as a result of other drugs. The National Drugs Strategy has identified the need for precise information on drug-related deaths as a priority area for research. For this purpose, the HRB was invited during the year to develop a National Drug-Related Deaths Index to collect and record data on drug-related deaths and deaths among drug users.

Work commenced on this initiative immediately. The index is an essential tool because drug-related deaths and deaths among drug users are indicators of drug misuse in Ireland. Accurate data will help identify the size of the problem and will indicate more precisely the causes of death. In time, this will allow policy makers, service planners and practitioners to develop appropriate responses to the consequences of drug misuse and to monitor the impact of supply and criminal justice issues, prevention measures, harm reduction intervention and rehabilitation responses.

**Sources for the initial review of drug related deaths were the General Mortality Register, studies that had extracted data from the Coroners office, the Central Treatment List and infectious disease statistics.*

Key research findings, information and news on drug misuse were also disseminated through the *Drugnet Ireland* newsletter. Due to demand and the growing availability of new findings, four issues were published during the year.

European research

The drugs division is a national focal point for the European Monitoring Centre for Drugs and Drug Addiction (EMCDDA). Research and information on the drug situation in Ireland is compiled every year and sent to the EMCDDA.

Work is ongoing to:

- Maintain the Irish contribution to the European Database on Demand Reduction Activities – 10 new projects were added to the database in 2005.
- Develop the five existing epidemiological key indicators of drug misuse with a view to improving national data sources and increasing the comparability of Irish and EU data.
- Collaborate with other focal points in the REITOX network on the conceptualisation of new indicators of drug misuse and the identification of new areas for research. Two structured questionnaires, on alternatives to prison for drug users and on policy and institutional frameworks, were finalised during the year for inclusion in the EMCDDA work plan 2006.
- Provide national reports and information exchange on the drug situation in Ireland to the EMCDDA and help disseminate the findings in Ireland.

Disseminating the results of research – The National Documentation Centre on Drug Use (NDC)

The NDC is a unique information resource providing Irish researchers with access to electronic and hard-copy research documentation on all aspects of drug use. It provides valuable support to researchers, media and the public.

During 2005 the capacity of the library continued to increase:

- The website was re-launched to help profile the library materials in a more user-friendly way.
- Compared to 2004 figures, there was an 18% increase in the number of queries received by the NDC, a 75% increase in the number of new users and a 100% increase in the number of unique visitors to the website.
- A monthly electronic newsletter on the latest work in drug-use research was produced and circulated to 216 subscribers.
- The NDC's library collection increased by 500 volumes.
- The NDC's information services were developed and enhanced to ensure an efficient, thorough and well-presented delivery of information to the users of these services.

Corporate Services

Corporate services underpin the operational environment in which staff carry out their work, and provide support to the Board. Creating the best possible environment will lead to greater productivity and a more positive employee culture. A major focus for all staff in 2005, from a corporate perspective, was the organisational review (see case study insert).

Other key achievements are highlighted under the headings below.

Finance

In 2005 the Department of Health and Children committed €50 million over five years to support the HRB's Investment Programme in Research for Health and Wealth and the Department's annual revenue grant to the HRB increased significantly. The HRB used the additional funding available in 2005 to increase the number of research awards made and to grant-aid the purchase of research equipment and other infrastructure.

The internal auditors conducted reviews of the research grants administration procedures and the value for money procedures within the HRB.

Work commenced on the development of an online management accounting reporting system for implementation in 2006, and budgeting and financial planning procedures were enhanced.

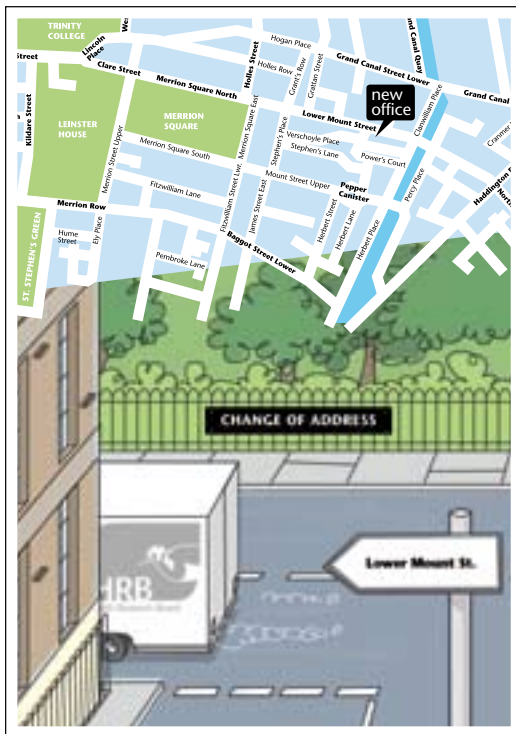

Information and communications technology (ICT)

Work continued on the implementation of the HRB's ICT strategy, which included the installation of broadband for all teleworkers, a new firewall server with improved security, and upgraded antivirus software on all computers. In consultation with the HRB's Partnership Committee, the ICT and Internet usage policy was updated.

The development of the functionality of the HRB website continued during 2005 and an extranet was built to allow the Board and members of research award selection panels to access relevant documentation online.

Facilities

A full review of the HRB's accommodation requirements was conducted during 2005 and ministerial approval was granted for the leasing of larger office accommodation in Lower Mount Street and the assignment of the HRB's lease on its offices in Holbrook House in Holles Street. Detailed plans were drawn up to facilitate the staff move scheduled for February 2006.

In addition, Board approval was granted for the HRB's Customer Service Charter, reception procedures were reviewed and new arrangements were put in place for catering for in-house events.

HR and organisational development

Staff performance is linked to a good working environment, excellent conditions, a positive culture and a good level of job satisfaction. The HRB conducted a second staff survey in 2005 as part of the organisational review. The results of this survey will be used as a benchmark to measure staff satisfaction over the coming years. The survey was completed in June, after which focus groups discussed some of the specific issues that had been raised. The management team completed an action plan which was referred to the HRB Partnership Committee for comment. The action plan will be implemented in 2006.

HR continued to support divisions in recruiting and training and in measuring performance through established best practice. Work continued on the implementation of the HR strategy and regular reports were submitted to the Performance Verification Group to profile the main achievements that had been made under the key headings highlighted in Sustaining Progress. All benchmarking payments were received by staff, based on ongoing delivery of business process improvements and modernisation in all key areas.

Communications

A communications strategy was devised to provide direction for a communications proactive effort commencing in 2006. The strategy identified key target audiences, the messages the HRB would like to take to them and the means by which this will be done.

The communications department supported the production of more than 25 publications, organised five key events, facilitated 11 sponsorships and secured sustained coverage in the national and medical media throughout the year.

CASE STUDY

In pursuit of excellence

The HRB undertook an organisational review in 2005 to establish the extent to which the organisation was delivering on its corporate strategy and to provide a programme of quality improvement for the future. The review began early in the year with a process of self-assessment when, with external facilitation, staff rated the performance of their divisions and of the organisation in terms of best practice. Using the Business Excellence Model, they compared performance on leadership, policy and strategy, people, resources, processes, customer results, people satisfaction, society results and key performance results. The Board undertook a facilitated review of its own performance. Staff and stakeholder reviews were undertaken by external companies.

The outcome of this self-assessment was collated into an organisational self-assessment report. This report was issued to an international, external review panel in October, along with the detailed results of a stakeholder survey and the review of the Board. The panel spent three days in the organisation in November reviewing the working processes and conducting interviews with key stakeholder groups.

The chair of the panel, Dr Don Thornhill, Chair of the National Competitiveness Council, presented the panel's findings to Board members and staff at the end of the third day. The panel's report confirmed the HRB's success in achieving its objectives, but emphasised the urgent need for a new corporate strategy to adapt to the rapidly changing environment in which the HRB now operates. The panel reported that the organisation had reached a very promising stage in its organisational development and was well positioned to seize opportunities presented by the profound external changes in the health, research and information sectors. It commended the HRB on its performance to date, on the respect it had earned from stakeholders and on the commitment of its staff. The panel recommended a number of changes to the structure and processes of the HRB to enhance its capacity to cope with current and future change.

A Quality Improvement Plan (QIP) based on the recommendations of the review panel will be adopted, and the recommendations will have a major impact on the shape of the HRB corporate strategy for the period 2007–2011.

Appendix 1

Participation in national, European and international groups and committees

The Health Research Board invests a significant amount of time contributing to a wide variety of national, European and international bodies. These include:

- European Science Foundation Member Association Group
- The Standing Committee of Research Funding Agencies
- Ad hoc group of European Nurse Research Developers
- HEA Infrastructures Group
- The Research and Development Office, Northern Ireland
- The Institute of Public Health in Ireland
- The Irish Forum on Global Health
- The Environmental Protection Agency
- Development Cooperation Ireland
- The Irish College of General Practitioners
- The Cystinosis Foundation
- The Medical Research Charities Group
- The Irish Council for Bioethics
- National Intellectual Disability Database Committee
- National Physical and Sensory Disability Database Committee
- National Intellectual Disability Database Regional Database Administrators' Group
- National Physical and Sensory Disability Database Regional Database Administrators' Group
- National Monitoring Committee overseeing the state investment programme in intellectual disability services
- National Advisory Committee on Drugs – Prevalence, Treatment, Consequences, Early Warning and Emerging Trends sub-committees
- Health Implementation Committee of the National Drugs Strategy, Department of Health and Children.
- Membership of addiction services performance management group
- Membership of the drug treatment services in prisons research group
- Membership of the Hepatitis C Scientific Advisory Subgroup of the Blood Borne Virus Forum
- Irish Health Sciences Library Group
- Pompidou Group
- European Monitoring Centre for Drugs and Drug Addiction
- EDDRA
- Expert Group on Mental Health Policy
- Mental Health Advisory Subgroups including - Research and Information Manpower, Education and Training Mental Health Services for Later Life, Forensic Mental Health Services, Services for eating disorders, Children and Adolescent Psychiatric Service Working Group Research
- Advisory Group Membership – National Disability Authority
- Adoption Agency
- Nursing Research Development Group
- Irish Internet Association
- Irish Evaluation Network
- Irish Society of Clinical Research Professionals
- Science Foundation Ireland

PROJECTS AND PROGRAMMES

Research Project Grants – General

Dr Catherine Greene

Medicine

Royal College of Surgeons in Ireland

€216,475.20

Regulation of apoptosis by misfolded Z
alpha-1 antitrypsin

Mr Ronan Conroy

Epidemiology & Preventive Medicine

Royal College of Surgeons in Ireland

€210,889.40

Can psychological models of mood and
positive affect inform interventions to
improve outcomes for individuals with acute
coronary syndrome?

Dr Dermot Walls

Faculty of Science and Health

Dublin City University

€229,298.40

Role and mechanisms of changes to the
transcriptome that lead to enhanced cell
survival during Epstein-Barr virus infection
and in related malignancies.

Dr Mauro Adamo

Chemistry

Royal College of Surgeons in Ireland

€256,346

Investigating the role of the PGHS-
peroxidase: rational design of a novel
inhibitor

Professor Kingston Mills

Biochemistry

Trinity College Dublin

€238,333.20

Regulation of T cell responses in immunity
to Bordetella pertussis

Dr Philip Newsholme

Biochemistry

University College Dublin

€237,796.80

Immune regulation of pancreatic beta cell
function and integrity in Diabetes

Dr Michael Gill

Psychiatry

Trinity College Dublin

€79,077.60

A prospective study of the clinical genetics of
methylphenidate response in children with
Attention Deficit Hyperactivity Disorder

Professor Charles Dorman

Microbiology

Trinity College Dublin

€101,203

Regulatory Evolution in a Bacterial Pathogen

Dr Lorraine Kyne

Dept of Medicine and Therapeutics

Mater Misericordiae Hospital

€220,605.70

A prospective study of the incidence,
outcomes, immune response and
antimicrobial susceptibility of toxin-variant
C. difficile.

Department of Anaesthesia
National University of Ireland, Galway
€223,717.20

Oxidant Stress, Hypercapnia and Acute Lung Injury: From Mechanistic Insights to Therapeutic Strategies

Professor Edward Johns

Physiology
University College Cork
€222,465.60

Oxidative stress in the kidney: interactions of superoxide anions and nitric oxide on fluid reabsorption at the proximal tubule

Dr Aidan Bradford

Physiology and Medical Physics
Royal College of Surgeons in Ireland
€14,888.40

Does oxidative stress contribute to impaired respiratory muscle function following chronic episodic hypoxia?

Dr Paul Moynagh

Pharmacology
University College Dublin
€167,220

Exploring human SEF as a regulator of Toll-like Receptor Signalling

Dr Ciaran Morrison

Biochemistry/ NCBES
National University of Ireland, Galway
€218,642.40

Molecular mechanisms of DNA damage-induced centrosome amplification

Dr Ziarh Hawi

Genetics
Trinity College Dublin
€240,220.80

Noradrenergic System Candidate Genes in an Irish ADHD Population: Linkage Disequilibrium Mapping (LD) and Refined Neuropsychological Phenotypes

Dr Paul Cotter

Microbiology
University College Cork
€118,415

Activity of the lantibiotic, lactacin 3147, against vancomycin resistant enterococci (VREs) and methicillin resistant Staphylococcus aureus (MRSA)

Dr Susan Smith

Department of Public Health and Primary Care
Trinity College Dublin
€234,660.20

Improving Outcomes in Type 2 Diabetes Across the Primary-Specialty Care Interface: A Brief Family Intervention

Dr Pdraig Strappe

Regenerative Medicine Institute
National University of Ireland, Galway
€221,065.20

Lentiviral Vector Delivery of siRNA and Neurotrophic Growth Factors for the Treatment of Injury to the CNS

Grant holder

Dr Gianluca Pollastri
Computer Science
University College Dublin
€156,600

Professor Kay Ohlendieck
Biology
National University of Ireland, Maynooth
€168,640

Dr Rosemary O'Connor
Biochemistry
University College Cork
€127,993

Dr Birgit Greiner
Epidemiology and Public Health
University College Cork
€252,666

Professor David Coleman
Oral Surgery, Oral Medicine and Oral
Pathology
Dublin Dental School and Hospital
€230,084.40

Professor Hannah McGee
Department of Psychology
Royal College of Surgeons in Ireland
€182,587.20

Dr Angus Bell
Microbiology
Trinity College Dublin
€228,914.40

Dr Walter Cullen
Department of General Practice
University College Dublin
€119,377.20

Dr Anne Parle-McDermott
School of Biotechnology
Trinity College Dublin
€251,924.90

Dr Anne MacFarlane
Dept of General Practice
National University of Ireland, Galway
€169,343

Professor Finbarr O'Sullivan
Statistics
University College Cork
€235,829.36

Title

New models for the prediction of
Quantitative Structure-Property
Relationships of chemical compounds

Role of the dystrophin-glycoprotein
complex and associated regulatory
elements in non-obese type 2 diabetic
skeletal muscle

Function of Mystique in epithelial cell
migration and in cancer progression.

The Effects of the Smoking Ban in Ireland:
Smoking Prevalence, Respiratory Health
and Smoking Risk Perception.

The role of cell wall di-tyrosine in
Candida albicans: potential novel
antifungal drug targets

Alcohol and unsafe sex in young Irish
adults: Understanding their complex
interaction in a general population sample

Inhibition of the terminal stages of host
haemoglobin degradation by malarial
parasites: a new approach to antimalarial
therapy?

Prevalence of problematic alcohol
consumption among current or former
heroin users attending general practice: a
cross sectional survey

Folate Polymorphisms: gene expression,
haplotypes and disease risk

Patients' perspectives of continuity of
care in general practice out of hours co-
operatives: A combined methods study

Statistical Methods for Quantitative
Dynamic PET Imaging Studies with
Extension to MR and CT

Grant holder

Title

Dr Evelyn Murphy

Biochemistry and Physiology
University College Dublin
€123,412

Elucidating the molecular mechanisms of methotrexate action

Dr Orina Belton

Molecular Medicine
University College Dublin
€246,617.20

The anti-atherogenic activity of CLA isomers

Dr David Finn

Department of Physiology
National University of Ireland, Galway
€236,679.20

Elucidating the role of the endocannabinoid system in fear-conditioned analgesia

Dr Ciaran Simms

Mechanical Engineering
Trinity College Dublin
€201,154

Numerical and Experimental Analysis of Wheelchair and Occupant Crash Safety

Dr Jane Ann Irwin

Veterinary Physiology and Biochemistry
University College Dublin
€120,760

The mucinase system in the lung - the key to mucus degradation?

Dr Yvonne Birney

Vascular Health Research Centre
Dublin City University
€121,404

Notch-mediated Migration of Vascular Smooth Muscle Cells

Professor Cecily Kelleher

Public Health Medicine and Epidemiology
University College Dublin
€241,944.50

Prospective follow-up of Lifeways Cross-Generation Cohort families

Dr Helen Whelton

Oral Health and Development, Oral Health Services Research Centre
University College Cork
€251,185.20

Dental Erosion in Irish Teenagers: An Epidemiological and Laboratory Investigation

Dr Veronica Campbell

Physiology
Trinity College Dublin
€148,574

Tissue engineering of cartilage and bone in a hypoxic environment

Dr Michael P. Carty

Biochemistry
National University of Ireland, Galway
€232,892.80

The role of DNA polymerase eta and Fanconi anemia D2 protein in the cellular response to cisplatin and mitomycin C.

Dr David Henshall

Physiology
Royal College of Surgeons in Ireland
€258,710

Role of Bcl-2-interacting mediator of cell death in seizure-induced brain injury and epileptogenesis

Grant holder

Dr Mary McCaffrey
Biochemistry
University College Cork
€235,574

Title

A functional molecular and cellular
analysis of Haemochromatosis

Programme Grants

Professor Paul McLoughlin
Human Anatomy and Physiology
University College Dublin
€951,438.40

Hypoxic lung disease

Professor Joe Duffy
Nuclear Medicine
University College Dublin
€1,060,935.30

Breast Cancer Metastasis: Biomarkers and
Functional Mediators

Professor William Powderly
Medicine
University College Dublin
€1,009,609

Dublin City HIV Cohort

Partnership Awards

Dr Sinead McGilloway
Department of Psychology
NUI Maynooth
€60,000.00

Health promotion in palliative care:
identifying and responding to attitudinal
barriers to service use

Maeve Martin
Community Care Psychology Department
HSE South East
€29,040.00

The epidemiology of psychiatric disorders
in children and adolescents in Clonmel: An
interview study following a preliminary
Child Behaviour Checklist screening of a
population of 3000 youngsters

Hilary Dunne
Research Department
Irish Society for Quality & Safety in Healthcare
€60,000.00

Healthdata –Are there benefits to
multidisciplinary collaboration for the
development of an All-Island research
information database on health initiatives

Margaret Leahy
Clinical Speech and Language Studies
Trinity College Dublin
€59,905.00

Standardisation of the Diagnostic Evaluation
of Articulation and Phonology (DEAP) on
Irish children, aged 3;0- 6;11 years

Dr Pdraig MacNeela
Department of Psychology
NUI Galway
€60,000.00

Chronic low back pain: A judgement
analysis of GPs' clinical judgements and
decisions

Grant holder

Dr Edel Conway
Centre for Research in Management
Learning & Development,
Dublin City University Business School
€29,450.00

Dr Susan O'Shea
Department of Haematology
Cork University Hospital

Sarah Jane Dillon
Research and Programmes
RehabCare
€60,000.00

Dr Pauline Faughnan
Equality Studies Centre and Social Science
Research Centre
University College Dublin
€60,000.00

Title

The impact of change on the attitudes and
behaviour of staff in the health service: a
longitudinal study

Randomised Controlled Trial of Supervised
Patient Self-Management of Warfarin Therapy
Using an Internet Based Expert System

Rare Disabilities on the Island of Ireland
– Investigation into the Development of an all
Island Support Service

Empowerment for Healthy Communities: An
action research programme on tackling health
inequalities in three communities through a
community development approach

Health Services R&D Awards

Dr Sean F Dinneen
Diabetes and Endocrinology
University College Hospital Galway
€1,185,245.00

Dr Fidelma Dunne
Department of Medicine/ Clinical Science
Institute
HSE - Western Region
€1,243,428.00

Prof John O'Leary
Department of Pathology
Coombe's Women's Hospital
€1,250,000.00

Prof Carol Fitzpatrick
Mater Child and Adolescent Mental Health
Services
Mater Hospital
€1,232,040.00

Mary Fitzsimons
Epilepsy Programme
Beaumont Hospital
€1,248,397.00

Implementing and evaluating a structured
education programme and a new model of
ongoing for Type 1 diabetes in Ireland

Atlantic DIP: Atlantic Diabetes in
Pregnancy Network. Prospective studies
to examine the outcome of pregnancy in
diabetic women

Working towards a world class cervical
screening system for Irish Women:
The Irish Cervical Screening Research
Consortium

Adolescent Depression and Suicidal
Behaviour - Making Knowledge Work for
Health

Revolutionising Chronic Disease
Management with Information and
Communication Technology : A socio-
technical project applied to epilepsy care in
Ireland

Grant holder

Title

Rare Diseases Research Awards

Dr Paul Kenna

Ocular Genetics Unit
Trinity College Dublin
€150,000.00

Exploration of exogenous microRNAs as a suppression tool and endogenous microRNAs in the context of retinal degenerations

Dr Maryanne Donovan

Biosciences Institute
University College Cork
€150,000.00

Pro-apoptotic BH3-only protein BIM and the regulation of photoreceptor apoptosis in retinal degeneration

Dr Marion Rowland

Children's Research Centre
Our Lady's Hospital for Sick Children
€150,000.00

The Epidemiology of Cystic Fibrosis Associated Liver Disease

INFRASTRUCTURE

Equipment Grants

Professor John Scott

Department of Biochemistry
Trinity College Dublin
€106,049

Application to the Health Research Board for a robotic system required for intra-mural research activities of the Health Research Board

Imaging Facilities

Professor Fergal Malone

Obstetrics and Gynaecology
Royal College of Surgeons in Ireland
€3,458,697

National Obstetric Ultrasound Research Consortium of Ireland (NOURCI)

Dr James FM Meaney

Radiology
St James's Hospital
€3,999,655

Proposal for a National Centre for Advanced Medical Imaging

Grant holder

Title

Health Information Systems Grants to underpin R&D

Dr William Gallagher

School of Bimolecular and
Biomedical Science
University College Dublin
€158,849.00

Digital slide management system:
application to biomarker discovery and
validation

Ronan Hearne

Adult Mental Health Service
Cluain Mhuire Services
€39,947.00

Mental health research system
development

Julian Pugh

Planning Commissioning and Change
Directorate
Health Services Executive
€242,250.00

Integrated case management information
system for drug users and related services

Professor Jane Grimson

Department of Computer Science
Trinity College Dublin
€250,000.00

A biobank information management
system for prostate cancer

Professor Ivan J Perry

Department Epidemiology and Public Health
Cork University Hospital
€164,319.00

A multidisciplinary application to support
data transfer and spatial analysis of
intentional and unintentional injuries

Professor Henry Paul Redmond

Department of Academic Surgery
Cork University Hospital
€111,500.00

A dynamic wound care database to
facilitate interdisciplinary combined coare,
allow furhter education of health care
professionals and to support evidence
based practice in the community

Grant holder

Strengthening Clinical Trials

Dr Meave Leahy
Mid Western Regional Hospital
€360,000.00

Dr John Kennedy
St James's Hospital
€3,120,000.00

Dr Seamus O'Reilly
Cork University Hospital
€960,000.00

Dr Ray McDermot
AMNCH Tallaght Hospital
€960,000.00

Dr John McCaffrey
Mater Misericordiae
€960,000.00

Dr Paula Calvert
Waterford Regional Hospital
€576,000.00

Dr Liam Grogan
Beaumont Hospital
€576,000.00

Dr Macon Keane
University College Hospital Galway
€1,608,000.00

Dr John Crown
St Vincent's University Hospital
€936,000.00

Prof John Armstrong
St Lukes Hospital
€1,440,000.00

Grant holder

Title

CAREER DEVELOPMENT SCHEMES

Clinician Scientist Awards

Prof Mary Cannon
Department of Psychiatry
Royal College of Surgeons in Ireland
€1,412,055.50

Adolescent brain development and risk for psychosis

Dr Joe Keane
Clinical Medicine
St James's Hospital
€1,596,683.00

Dissecting out the pathways of successful macrophage responses to infection with *M. tuberculosis*

PhD Training Sites

Professor Marina Lynch
Department of Physiology
Trinity College Dublin
€1,000,189

From basic neuroscience to clinical applications: an integrated PhD programme

Dr Dermot Kelleher
Department of Clinical Medicine
Trinity College Dublin
€1,074,608.60

Molecular Medicine - from genes to function

Post Doctoral Research Fellowships

Dr Steven W Kerrigan
Department of Clinical Pharmacology
Royal College of Surgeons in Ireland
€214,807.01

The influence of shear stress to investigate the interactions between *Streptococcus sanguis* and *Staphylococcus aureus* with perfused human blood platelets.

Dr Aedin Culhane
Bioinformatics Section
University College Dublin
€207,247.01

Application of multivariate methods to the analysis of a compendium of gene expression profiles in Leukaemia

Dr Patrick Kiely
Department of Biochemistry
University College Cork
€214,906.61

To determine the role of RACK1 and its IGF-1R regulated binding partners in IGF-1 mediated metastasis and motility

Dr Aileen Houston
Medicine
University College Cork
€214,906.61

Elucidation of the molecular mechanisms underlying Fas ligand (FasL/CD95L) expression in human colon tumour cells

Dr Andrew Lindsay
Department of Biochemistry
University College Cork
€214,847.01

Characterisation of the Role of the Human Myosin V Family in Cell Division and Disease

Grant holder

Title

Dr Brona Murphy

Department of Physiology and Medical Physics
Royal College of Surgeons in Ireland
€214,907.01

Investigation of death receptor signalling in neuronal death & neuroplastic changes during epilepsy development

Dr Gerard Sergeant

Regional Development Centre
Dundalk Institute of Technology
€214,652.01

Pacemaker Activity in Urethral Interstitial Cells

Dr Emer Bourke

Department of Biochemistry
National University of Ireland, Galway
€214,907.01

Proteomic Definition of DNA Damage Response in Human Cells

Clinical Research Training Fellowships

Dr Matthew Greenway

Department of Clinical Neurosciences
Royal College of Surgeons in Ireland
€168,993.05

Hypoxia-induced Neurotrophic Factors in the Irish ALS Population

Dr Martina Ni Chonghaile

Department of Anaesthesia and Intensive Care
National University of Ireland, Galway
€183,612.60

Evaluation of the effects and mechanisms of action of Therapeutic Hypercapnic Acidosis in Severe Pulmonary Sepsis

Dr Tom Cawood

Department of Endocrinology
University College Dublin
€182,719.19

Potential Therapeutic Targets in Thyroid Associated Ophthalmopathy

Dr Eoghan O'Neill

Department of Industrial Microbiology
University College Dublin
€183,612.60

Genetic analysis of the biofilm phenotype in clinical isolates of methicillin-resistant *Staphylococcus aureus*

Dr Marina O Kane

Department of Biochemistry and Physiology
University College Dublin
€180,212.60

Corticotrophin-Releasing Hormone mediated responses in Psoriasis

Dr Catherine McVeigh

Department of Geriatric Medicine
Belfast City Hospital
€171,790.18

Is inflammation involved in the development of cognitive impairment or depression after stroke

Dr Tora Leong

Department of Cardiology
Trinity College Dublin
€110,861.60

The Role of Novel Risk Markers in Predicting Atherosclerosis in Patients with Chronic Stable Angina

Grant holder

Title

Dr John McDermott
Department of Endocrinology and
Diabetes Mellitus
National University of Ireland, Galway
€183,612.60

Circulating endothelial progenitor cell
number and function in progressive diabetic
renal disease: declining in tandem with
increasing cardiovascular risk?

Fellowships in Health Services Research

Mr Michael Rosato
Epidemiology and Public Health
Queens University Belfast
€205,307.01

Towards a better understanding of self-
reported health: a series of studies using the
ONS-LS

Ms Emma White
Department of Mathematics
National University of Ireland, Maynooth
€130,531.46

Modelling the Drug Using Career with a
View to Informing and Assisting Health
Services and Policy

Dr Lisa Kelly
Departments of Neurology and Medicine
for the Elderly
University College Dublin
€132,126.46

Dementia Following Stroke: A sub-study of
The North Dublin Population Stroke Study

Dr Karen Ryan
Palliative Medicine
St Francis Hospice, Raheny
€128,923.21

Towards a Patient-centred and Carer-oriented
Service: Identification of the Palliative Care
Needs of Adults with Intellectual Disability,
Development and Delivery of a Local
Quality Improvement Programme

Clinical Research Fellowships in Nursing and Midwifery

Ms Patricia Larkin
School of Nursing and Midwifery
Trinity College Dublin
€204,507.01

Women's expectations of and preferences for
childbirth

Ms Kate Frazer
School of Public Health and Population Science
University College Dublin
€205,157.11

An evaluation of the knowledge and attitudes
of primary care nurses towards Hepatitis C
Virus infection

Ms Aoife Moran
School of Nursing
Dublin City University
€135,026.46

The experience of the person with end stage
renal disease on haemodialysis therapy

Ms Patricia Leahy Warren
The Catherine McAuley School of Nursing
and Midwifery
University College Cork
€205,307.01

First Time Mothers: The Relationship
Between Support, Infant Care Self-Efficacy
and Satisfaction with Parenting

Grant holder	Title
Cochrane Fellowships	
<p>Mr Brendan Dineen Department of General Practice National University of Ireland, Galway €33,184.00</p>	Laser treatment for diabetic retinopathy
<p>Dr Clodagh Cashman CIE Occupational Health Unit CIE €79,346.00</p>	Alcohol and drug screening of people whose work involves driving to prevent injury
<p>Ms Genevieve Becker National University of Ireland, Galway €67,711.00</p>	Methods of milk expression in lactating women
<p>Ms Josephine Hegarty Faculty of Medicine and Health University College Cork €93,774.00</p>	Watchful waiting versus prostatectomy for prostate cancer
<p>Professor Malcolm MacLachlan School of Psychology Trinity College Dublin €62,456.00</p>	Psychosocial Interventions for Physical Disability arising from Injury
<p>Dr Patrick Manning Department of Respiratory Medicine St James's Hospital €121,256.00</p>	Ciclesonide for chronic asthma in adults and children
NCI Summer Curriculum in Cancer	
<p>Anthony O'Grady Department of Pathology Royal College of Surgeons in Ireland</p>	Molecular Prevention
<p>Shelagh Wright School of Nursing Dublin City University</p>	Molecular Prevention
<p>Antoinette Perry Department of Haematology Trinity College Dublin</p>	Molecular Prevention
<p>Nicola Miller Department of Surgery St James's Hospital</p>	Molecular Prevention

Grant holder	Title
<p>Juliette Sheridan Centre for Colorectal Disease St Vincent's University Hospital</p>	Molecular Prevention
<p>Alan Coss Centre for Colorectal Disease St Vincent's University Hospital</p>	Molecular Prevention
<p>Niamh O'Rourke Primary, Community and Continuing Care Health Services Executive - East Coast Area</p>	Molecular Prevention
<p>Fiona Quinn Cancer Molecular Diagnostics St James's Hospital</p>	Molecular Prevention
<p>Mary-Clare Cathcart Department of Oncology Trinity College Dublin</p>	Molecular Prevention
<p>Barbara McNamara Department of Biochemistry St James's Hospital</p>	Molecular Prevention
<p>Paul Kavanagh Public Health Department Health Services Executive - Southern Area</p>	Principles and Practice of Cancer Prevention and Control
<p>Marie Lavin Department of Oncology Mater Misericordiae University Hospital</p>	Principles and Practice of Cancer Prevention and Control
<p>Suzanne Rowley Department of Surgery St James's Hospital</p>	Principles and Practice of Cancer Prevention and Control
<p>Aine McNamara Public Health & Planning Health Services Executive - Midlands Area</p>	Principles and Practice of Cancer Prevention and Control
<p>Ursula Bond Department of Microbiology Trinity College Dublin</p>	Principles and Practice of Cancer Prevention and Control and Molecular Prevention
<p>Emer O'Connell Public Health and Epidemiology University College Dublin</p>	Principles and Practice of Cancer Prevention and Control and Molecular Prevention
<p>Lisa O'Connor Department of Haematology/ Oncology St James's Hospital</p>	Principles and Practice of Cancer Prevention and Control and Molecular Prevention

Grant holder

Title

Joint Research Fellowships in Cancer

Dr Zubair Kabir
Pharmacology and Therapeutics Department
St James's Hospital Hospital
€158,545.00

Tobacco control policies, lung cancer and smoking patterns: Ireland and Massachusetts

Edward Fox
Conway Institute of Biomolecular and Biomedical Research
University College Dublin
€131,131.00

Frequency of random mutations and genomic instability events during colorectal cancer progression

Summer Students

Mr Edmond Ang
Medicine
University College Dublin
€1,400

Regulation of gene expression in a clonal pancreatic beta-cell line

Mr Ciaran Skerry
Department of Chemistry
National University of Ireland, Maynooth
€1,600

Synthesis and Anti-Microbial Screening of New Metal-Based Drugs

Ms Siobhan Ryan
Chemical and Life Science Dept
South Eastern Health Board
€1,600

Retinal Visual Acuity in Patients with Age-Related Maculopathy

Ms Karen McDermott
Science
Adelaide and Meath Hospital
(incorporating NCH)
€1,200

Malnutrition in Inflammatory Bowel Disease: identifying patients at risk

Mr Brendan Lawless
Medicine
St Vincent's University Hospital
€1,600

Validation of Functional Transcranial Doppler Imaging Across Motor and Verbal-Production Tasks

Ms Carol Keigher
Medicine
University College Hospital, Galway
€1,600

Treating to target in type 2 diabetes

Mr Alif Adlan Mohd Thabit
Medicine
Royal College of Surgeons in Ireland
€1,600

Inflammatory cells in COPD and Alpha-1 Antitrypsin deficiency

Grant holder

Title

Ms Allison Bradley

Electronic & Electrical engineering
St Vincent's University Hospital
€1,600

The influence of motor unit firing rates on peri-stimulus time histograms: a quantitative study

Ms Irene Walsh

Biochemistry
University Dental School, Cork
€1,600

Diet, oral hygiene, salivary parameters and dental erosion among dental students

Mr Harivinthan Sellappan

Faculty of Medicine
University College Dublin
€1,600

The effect of partial D2 receptor agonists on globus pallidus GABA, glutamate and aspartate release in a rodent model of Parkinson's disease

Ms Puspha Raman

Medicine
University College Dublin
€1,600

Exploring the differences between in situ and invasive breast cancer

Ms Maureen Clarke

Medicine
Royal College of Surgeons in Ireland
€1,200

Removing patients from a GPs list: Patient and Doctor perspectives

Ms Ciara O'Riordan

General Practice
National University of Ireland, Galway
€1,600

General Practice Utilisation Patterns in 1124 Mothers and Babies over the first three years of follow-up in Lifeways Cross-Generation Cohort Study.

Ms Sinead McKenna

Respiratory
St Vincent's University Hospital
€1,600

Cystic Fibrosis

Ms Ciara O'Hagan

Department of Human Anatomy and Physiology
University College Dublin
€1,600

Influence of gender and inspiratory muscle training on perception of dyspnea on normal healthy subjects

Ms Dervla Connaughton

Student
Royal College of Surgeons in Ireland
€1,600

The role of angiogenin in motoneuron degeneration

Mr Tonye Wilcox

Medicine
Royal College of Surgeons in Ireland
€1,600

Identification of novel interactions between *S. gordonii* and human blood platelets.

Grant holder

Mr Robert Scully
General Practice
National University of Ireland, Galway
€1,600

Ms Anita Maria Sheahan
Biology Department
Trinity College Dublin
€1,600

Ms Hebah Nashat
Medicine
National University of Ireland, Galway
€1,600

Mr Mark Hehir
Obstetrics and gynaecology
University College Hospital, Galway
€1,600

Ms Sinead Kelly
Biology
National University of Ireland, Maynooth
€1,600

Ms Gillian Murphy
Department of General Practice
National University of Ireland, Galway
€1,600

Mr Khaled Almansoori
Medicine
Royal College of Surgeons in Ireland
€1,600

Ms Lisa McAnena
Department of Surgery
National University of Ireland, Galway
€1,600

Ms Doireann O'Flaherty
Surgery
National University of Ireland, Galway
€1,600

Ms Clare O'Sullivan
Medicine
St Vincent's University Hospital
€1,600

Title

What determines patients' satisfaction with out of hours primary medical care?

Mechanism of action of alum as a vaccine adjuvant

Identification of factors responsible for influencing mesenchymal stem cell migration towards prostate cancer cells

The fetoplacental unit in association with obesity in pregnancy

The role of genetic polymorphism in natural killer cell receptors and alcohol consumption in susceptibility to psoriasis

A cross sectional study to describe the clinical impact of Ambulatory Blood Pressure Monitoring in routine general practice.

The ability of BMP-7 to promote osteogenesis on collagen-glycosaminoglycan scaffolds

Evaluation of the expression and prognostic significance of HER1-4 in breast cancer

Characterisation of Cell Sub-Populations in Primary Breast Cell Culture

EEG correlates of positive and negative future thinking

Grant holder

Title

Ms Sarah Kandil
Neurscience
Trinity College Dublin
€1,600

Are interferon gamma-primed microglia more responsive to amyloid-beta?

Mr David Costello
Department of Physics
Dublin Institute of Technology
€1,600

Development of a novel method for differentiating breast lesion in diagnostic ultrasound images

Mr Stephen Penney
Biotechnology
University College Dublin
€1,600

Effect of Plasma Treatment on Cellular Response

Ms Elyssa Majawit
NA
University College Dublin
€1,600

The relationship between lifestyle and socio-demographic profile at recruitment and first outcome follow-up through general practice in 2000 adult participants in the Lifeways Cross-generation Cohort Study

Ms Mei Ann Choong
Paediatrics, NUI, Galway
National University of Ireland, Galway
€1,600

Determinants of Metabolic Control in Young People with Type 1 Diabetes: Audit of Clinical Attendees

Mr James O'Dwyer
Physiotherapy
St James's Hospital
€1,600

Validation of the RT3 activity sensor in patients with Chronic Obstructive Pulmonary Disease

Ms Sheila Sullivan
Pathology
Royal College of Surgeons in Ireland
€1,600

Determination of cyclooxygenase-2 (cox-2) expression in bladder cancer samples from smokers and non-smokers.

Mr Henrik Wahlberg
Pathology
Royal College of Surgeons in Ireland
1,600

Assessment of telomerase expression levels in squamous cell carcinoma from both renal transplant and non-transplant patients

Mr Hugh Ramsay
Medicine
Royal College of Surgeons in Ireland
€1,600

Antibacterial and anti-inflammatory properties of nicotine

Ms Annie Ngu
Medicine
University College Dublin
€1,600

Prevalence of Epilepsy

Grant holder

Title

Mr Dónal Tighe

Student
Mater Misericordiae Hospital
€1,600

The role of net1 and myeov in colorectal cancer cell proliferation and invasion.

Ms Romaine King

Gastroenterology
St Vincent's University Hospital
€1,200

Bile acids and oesophageal metaplasia

Ms Cliodhna Ni Choisdealbha

Physiotherapy
East Coast Area Health Board
€1,600

The relationship between physical fitness, physical functioning and psychological status in patients one year post non-acute ischaemic stroke.

Ms Roisin Colleran

Medicine
National University of Ireland, Galway
€1,600

Viral vector delivery of oligodendrocyte differentiation factors to adult mesenchymal stem cells

Ms Audrey Melvin

Medicine
University College Dublin
€1,600

Analysis of the imprinted insulin like growth factor 2 (IGF2), and alpha-T-catenin genes in transitional cell carcinoma of the bladder (TCCB)

Mr Michael Blake

School of Pharmacy
University College Cork
€1,600

Investigation into pain control achieved by drug delivery to peripheral opioid receptors

Ms Jennifer Rouine

Physiology
Trinity College Dublin
€1,200

Analysis of exercise-induced neurogenesis in the rat brain

Mr John Byrne

Student
National University of Ireland, Galway
€1,600

Trancription complex formation in pluripotential mesenchymal

Ms Norah Jordan

Department of Psychology
Beaumont Hospital
€1,600

Factors influencing referral pathways from acute neurosurgical services- A systematic audit

Ms Lakshmi Penugonda

Clinical Pharmacology
Royal College of Surgeons in Ireland
€1,600

Characterization of a novel prognostic assay for platelet activation in human blood
